

Of Reviews, CS2, and Pummel Party

It was the kind of quiet month, that wasn't filled with the tension of looming deadlines or the frantic tapping of keyboards before a product launch. No, this was the quiet of a well-oiled machine, humming along to the rhythm of routine. The regular day's work had become the unexpected star of the month, shining in its uneventful glory.

Rise of CS2

It was in this tranquil tableau that Satvik, the unofficial office CS2 pro, saw an opportunity. With the stealth of a cat and the cunning of a fox, he re-introduced his colleagues to the digital battlegrounds of CS2. Mithun, Jayesh, Ali, and Prakrit were soon enlisted, their workstations transforming into strategic war rooms. They huddled over their screens, mice clicking in a symphony of virtual gunfire, stealing moments between tasks to grind through the game levels.

The office air was electric with whispered tactics and stifled cheers. Coffee breaks became strategy sessions, and the printer corner turned into a debriefing zone. Satvik, the puppet master of pixels, had pulled the strings masterfully, and his mario-nettes danced to the tune of teamwork and headshots.

Pummel Party Pandemonium

But why stop at one game when you

can have two? Manish and Dhriti, the dynamic duo of persuasion, decided it was time for some variety. Enter Pummel Party, the game that promised fun and delivered chaos. The team gathered, controllers in hand, ready to dive into the pixelated party.

Laughter erupted from the office room turned gaming den. Characters bounced across the screen, dodging obstacles and each other, as the team navigated through the whimsical world of Pummel Party. It was a sight to behold: professionals by day, party pummelers by night (or late afternoon, to be precise).

The game sessions were a hit, a resounding success that echoed through the office halls. The sound of

joyous uproar blended with the clatter of keyboards, creating a melody unique to the Digit Test Centre.

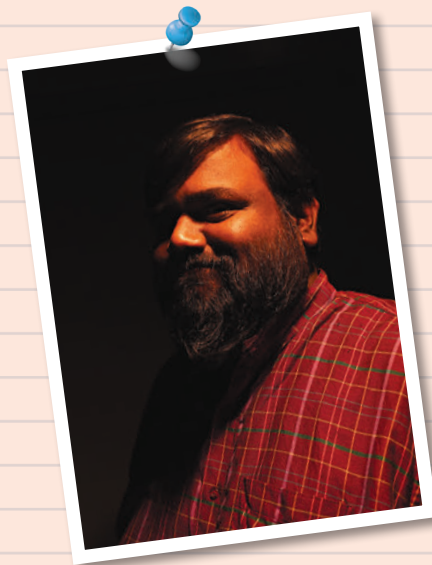

Productivity Unscathed

As the month drew to a close, one might wonder about the impact of these gaming escapades on the team's productivity. But fear not, for the Digit Test Centre was no ordinary office. The games, rather than being a distraction, became a catalyst for camaraderie and creativity.

The team returned to their tasks rejuvenated, their bonds strengthened by shared victories and hilarious defeats. The quiet month was not so quiet after all; it was filled with the sounds of friendship and the spirit of competition.

And so, the story of the Great Office Game-Off comes to an end, not with a bang, but with a click—a mouse click, that is. For in the world of the Digit Test Centre, work and play coexisted in perfect harmony, proving that sometimes, the best way to hit the target is to take a moment to play the game.

And we almost forgot to mention, to blow off some steam and geek out, we went to ComiCon as well! That was fun! **d**
