

TECH FASTS

Trying a full day or a weekend without technology can be a liberating experience. Plan activities that don't involve screens, like hiking, reading, or painting. This can provide a much-needed break from digital devices and allow you to engage in activities that you enjoy. It can also help you realise how much time you spend on technology and encourage you to use it more mindfully in the future.

NOTIFICATION AUDIT

Reviewing all your app notifications and disabling unnecessary ones can significantly reduce constant digital interruptions. This can help you stay focused on your tasks and reduce the stress caused by constant notifications. It allows you to control when and how you interact with your devices, rather than being at the mercy of every notification. This practice can lead to improved productivity and a more peaceful digital experience.

SINGLE-TASKING

Instead of multi-tasking across several devices, focusing on one task at a time can reduce digital overload and increase productivity. It allows you to fully engage in the task at hand and can lead to better results. Single-tasking encourages deep work, where you can fully immerse yourself in a task without the distraction of switching between devices.

PHYSICAL ACTIVITY

Incorporating more physical activity into your day can provide a break from screen time and also have numerous health benefits. This could be a short walk, a workout session, or even gardening. Physical activities not only help maintain physical health but also improve mental well-being by reducing stress and improving mood. They provide a natural contrast to the sedentary nature of screen time and promote a more balanced lifestyle.

DIGITAL SUNSET

Implementing a digital sunset, i.e., no devices after a certain time in the evening, can help in unwinding at the end of the day and improve sleep quality. It can also provide a peaceful environment for reflection and relaxation. A digital sunset encourages a clear separation between your digital and personal life, allowing you to fully relax and prepare for a good night's sleep.

MINDFUL SOCIAL MEDIA

Limiting your social media usage and being mindful and intentional about the time you spend on social media platforms can help reduce digital distractions and allow you to engage in more meaningful activities. It encourages you to use social media purposefully rather than mindlessly scrolling through feeds. This practice can lead to a more balanced digital life, where social media is a tool for connection rather than a source of distraction.
