

# Smartphone customisation ideas

## Tips and tricks to customise your Android or iOS smartphone to make your device truly yours

**Dhriti Datta** | [dhriti@digit.in](mailto:dhriti@digit.in)

If you want to unlock a brand new feel and experience on your smartphone, a cornucopia of tools and apps can help you achieve that. Android has long been recognised as one of the more customisable user interfaces, but iOS is attempting to catch up. From simply switching out your wallpaper to applying a new launcher, smartphone customisation can be exhilarating. It is almost akin to buying a new smartphone without any of the associated costs. Some of these are as simple as downloading an app, while some require you to tinker with your phone for a while. Either way, the possibilities are endless. So, if you're a

young consumer who is tired of the vanilla look of your smartphone, these smartphone customisation ideas could overhaul the look and feel of your phone to a great extent.

### HOW TO CUSTOMISE YOUR ANDROID PHONE?

Customisation is one of the key areas users choose Android phones over their iOS counterparts. If you're looking to revamp the look of your Android phone, this article will provide you with some useful insight and ideas. We will delve into customising your Android phone's widgets, wallpapers, lock screen, icon pack, and more. We will also look into some advanced customisation options such as rooting your phone. Each of these tips can be converted into full-fledged step-by-

step guides; so let us know by writing to us at [editor@digit.in](mailto:editor@digit.in) if you would like us to create a detailed guide for any of these tips.

### Experiment with custom widgets

Widgets are dynamic shortcuts to your apps that can provide you with access to the app's functions and information at a glance without having to open the app. Android has several widgets you can add to your home screen by default. You simply need to long-press your home screen and then head over to Widgets. However, you can go one step further by creating custom widgets. There are several widget builder apps available in the market, but one of the most celebrated ones is KWGT Kustom Widget Maker. You can find this app on the Google Play Store.

The process of creating a widget is a bit convoluted and requires some practice but you can ease the process by downloading KWGT Widget Packs from the Play Store that work perfectly with the app. Some KWGT Widget Packs include Shadow KWGT, Koda for Kustom, Desaturate KWGT, Iconic KWGT, FusiOn for KWGT, and even Apple for KWGT (for Apple-style widgets). Some of these are paid, but
