

most cost only ₹100 or so, and it's a one-time fee for some pretty amazing-looking widgets. I made this minimalist clock and date widget using Koda for Kustom (which is free), you can check it out in the image below.

Change up your wallpaper

Use apps such as Backdrops and KLWP to change up the wallpaper on your phone. Backdrops is home to some gorgeous wallpapers – some free and some paid. In the Collections tab, you will find a bunch of folders that categorise the wallpapers by theme, making it easy to find the perfect one for you. KLWP is similar to KWGT; you can make your own custom wallpapers here with a great detail of useful information. Check out the wallpaper I made on KLWP below which includes information such as the date, day, time, alarm information, CPU usage, memory usage, and battery percentage. It provides a lot of information in a single glance which can be quite informative and useful for power users.

Additionally, you could also leverage the power of AI to create wallpapers on certain phones. These include the latest Google Pixel and Samsung phones. In fact, even the latest

Motorola Edge 50 Pro comes with an AI wallpaper generator that uses a photo you click as inspiration. So, it could base the wallpaper off of your clothes, paintings, or pretty much anything you click. You can also look into free image sites such as Wallhaven and Unsplash to find a new wallpaper.

Customise your lock screen

Your lock screen can be pretty boring

and static, with minimal useful information. Customising your lock screen can make your phone feel fresh and you can even access some important information without having to unlock your screen. KLCK is, once again, very similar to KWGT. It has a similar editor which you can use to create your own custom lock screen. It has some preset lock screens that you can use as well.

However, if you don't want to get into creating your own lock screen, the lock screen customisation on Android 14 is pretty decent as well. It allows you to change the style of the clock, change shortcuts on the corners of the display, switch up text colour and style, and more. You can also choose whether the lock screen shows notifications and how much information it displays to protect your privacy. If you want access to more widgets on your lock screen, look into apps that can help you add those. One example is the Lockscreen Widgets and Drawer app which costs ₹130.

Choose a new icon pack

Another important step to overhaul the look of your phone is to change up your icon pack. The stock skin on most Android phones doesn't support icon
