

rooting if you are confident in your ability to do so. There is no universal solution for rooting every smartphone, but the process has become much easier over the years. For instance, a new application called APatchLite on Github makes it process much easier. There are even some apps that allow you to root an Android device with a single tap! Some examples include KingoRoot, KingRoot, and OneClickRoot. For more help with rooting your particular device, you can always Google Search "How to root xx your smartphone here xx" and check out the entire process of XDA.

HOW TO CUSTOMISE YOUR IPHONE?

Not too long ago, Apple decided to get into the customisation game with the iOS 14 update. At long last, this update brought customisation options like adding widgets and changing app icons to iPhones. In fact, the iOS 14 update caused a massive iPhone customisation trend with Pinterest seeing a record-high number of daily downloads on September 21, as reported by data analytics firm Apptopia. The youth embraced this change with many trying to come up with their own unique home screens while some used Pinterest for inspiration. You can customise a lot of aspects of your iPhone in 2024. Let's explore the options.

Make your lock screen wallpaper a rotating gallery

With the iOS 16 update, Apple has introduced a feature that allows you to shuffle a set of pictures for your wallpaper – a makeshift gallery of sorts. All you need to do to set this up is head to Settings > Wallpaper. Tap on Add New Wallpaper and then click

on Photo Shuffle. Your library will be processed and you can choose the pictures you want your lock screen wallpaper to shuffle through. You can also choose how often the wallpaper changes by clicking on the three dots in the bottom right corner of the Edit lock screen page, which is quite handy. This is a fun little way to change up the look of your phone on a regular basis.

Use custom icons

Like the Shortcut Maker app on Android, iOS' Shortcuts app allows you to switch out the default iOS icons by creating a shortcut for the app using any image you want. To switch out the icons, go to the Shortcuts app and click on the '+' button on the top right. Click Add Action and then search for 'Open App' and click on that. Click on the faint 'app' text in light blue and select the app you want to work on. Say you select Camera here, you will then need to click the arrow next to 'Open App' and then select Choose Icon. Now, search for an alternative icon for the camera, customise the colour and click done. Now, click on the arrow again and then click Rename. Name the shortcut "Camera" and then click on "Add to Home Screen". Remove the original camera app from your home screen and you're done! You have a custom icon for your app.

Play around with your lock screen

The lock screen on iOS has been

majorly overhauled. It has numerous customisation options. You can change the font, colour, thickness of the text, and more. You can also add widgets on the lock screen as well with options such as reminders, calendar, health, fitness, news, and more. Certain filters can be applied to your lock screen as well. Additionally, portrait photos' depth information is captured and this can help achieve a great 3D effect.

Use widgets

Widgets are finally on iOS! There are several widgets on iPhones by default. To access these, just long press the home screen and click the '+' icon on the top left side of the screen. From here, you can choose from several widget options for apps such as Clock, Reminders, Stocks, News, Calendar, Find My, Mail, Music, and much more. There's also a Smart Stack feature that shows several app widgets stacked on top of each other that you can scroll between. Alternatively, you can allow your iPhone to decide which app widget to show you when depending on your usage history.

To add a whole new level of customisability to widgets, you can download some Widget-specific apps such as Widgetsmith, Widy Widgets, and Widget Box. These allow you to add some highly customisable widgets to your home screen. These include photo galleries,

customisable date and time clocks, activity trackers, countdown timers, time zone trackers, and more.
