

Nosie Buds Xero

The Noise Buds Xero, priced at Rs 3,999, are a compelling entry in the sub-Rs 5,000 TWS earbuds market. They boast a driver unit size of 12.4mm, which is larger than the average of 9.83mm. High-pitched instruments and female vocals, for instance, sound incredible on the Noise Buds Xero. The earbuds also have a lower audio latency of 50ms compared to the average of 58.9ms, ensuring a more seamless audio experience.

The Bluetooth version is 5.3, which is higher than the average of 5.01, offering a more stable and efficient connection. One of the standout features of the Noise Buds Xero is the battery life of the charging case, which is 42 hours. This is significantly higher than the average of 24.11 hours, providing users with extended listening time. The charge time

is also slightly less than the average, at 1.5 hours compared to 1.58 hours.

The Noise Buds Xero are true wireless devices, meaning there are no cables connecting any part of the device together. However, they do not come with wingtips for a more secure

fit. Despite this, the earbuds are comfortable to wear for extended periods. The Noise Buds Xero also support SBC and AAC codecs, along with Adaptive ANC of up to 50dB. This feature helps to reduce ambient noise. In terms of audio performance, the Noise Buds Xero have a treble nature. This means that they excel in reproducing high-frequency sounds, making them ideal for genres such as classical and acoustic music. However, they may not be the best choice for bass-heavy genres like hip-hop and EDM.

Overall, the Noise Buds Xero offer good value for money. They deliver solid audio performance, have a long battery life, and come with useful features like Adaptive ANC. However, they may not be the best choice for users who prefer a bass-heavy sound signature. Despite this, the Noise Buds Xero are a worthy consideration for anyone looking for affordable TWS earbuds.

EPOS Expand Vision 1

The EPOS Expand Vision 1 Personal USB Camera is a compact and portable device designed for a variety of use cases. It's perhaps the smallest 4K, 30Hz webcam we've seen, making it an ideal choice for businesspersons or college instructors who are always on the move.

The 4K image quality is pretty good under certain conditions. The integrated dual noise-cancelling mics offer excellent sound quality, ensuring clear audio during your meetings or lectures. A small dial built into the webcam serves as a privacy shutter. One of the standout features of this webcam is its portability. It comes with a nifty carrying case. However, the EPOS Expand Vision 1 is not without its flaws. The design of the webcam limits what displays it can connect to. It has trouble simply holding on to some displays, which can be a significant drawback for users who frequently switch between different monitors.

The EPOS control app is supposed to enhance the user experience, it falls short in delivering a seamless interface. This can be a point of frustration for some. Despite these shortcomings, it does have its merits. The 4K camera is a tremendous upgrade over a computer camera, offering high-detailed HD. The camera

works well with custom backgrounds, even when blurred, making it a good choice for users who work from home or in shared spaces.

The EPOS Expand Vision 1 is a mixed bag. While it offers excellent image and sound quality, its design limitations and underwhelming app performance can be deal-breakers for some users. However, its compact size and portability make it a good choice for users who are always on the go. It's a device that might work for you, or it might not. But for the price that you are paying, you might want to think twice before making the investment.
