

Polycab Silencio Mini: A breath of fresh air

The Polycab Silencio Mini Advanced BLDC Ceiling Fan caught my attention with its promise of energy efficiency, quiet operation, and a host of modern features. After having the Natural Wood finish fan installed in my living room, I was eager to see how it would perform in a real-world setting. The installation process itself was fairly smooth and hassle-free, the installation guy ensuring that the fan was securely mounted and operational within an hour. The fan's Natural Wood finish added a touch of elegance to the living room decor, blending seamlessly with the interiors.

True to its name, the Silencio Mini operates almost silently. The fan's BLDC (Brushless Direct Current) technology significantly reduces motor noise. However, at full speed you do hear the fan whirring around, I must add. While I couldn't measure the exact energy consumption, the promise of saving up to ₹2,500 annu-

ally on electricity bills is compelling. The fan is 5-star rated and consumes less power compared to conventional fans, thanks to the BLDC motor.

The RF Point Anywhere Remote is a game-changer. Unlike traditional IR remotes that require direct line-of-sight, this remote can control the fan from anywhere in the room. Pairing up to 50 fans with a single remote is another innovative feature, making it ideal for homes with multiple fans. One of my favorite features of this fan is the Ultimate 25 Speed Setting. This allows

for precise control over the fan speed, solving the common issue where the gap between speed settings is too wide. Whether you need a gentle breeze or a more robust airflow, you can find the perfect speed within a few clicks. The Sleep Mode gradually reduces the fan speed every hour, ensuring a comfortable night's sleep while conserving energy. The Beep Sound provides auditory confirmation of remote commands, which, while functional, might be a bit annoying at night. However, it's a minor inconvenience compared to the overall utility. For those moments when the remote goes missing, the fan speed can be adjusted by toggling the wall switch. This manual override feature is a thoughtful addition.

The Polycab Silencio Mini Advanced BLDC Ceiling Fan feels more than just a fan; it's a blend of technology, efficiency, and style. At a competitive price point, it offers features that justify its cost, providing both aesthetic appeal and functional benefits. Overall, this fan was a pleasant surprise, combining advanced technology with everyday utility seamlessly. If you're in the market for a new ceiling fan, the Silencio Mini is definitely worth considering.

Honeywell Trueno U5100 earbuds – Well-implemented features coupled with surprising performance!

The budget TWS segment in India right now is one of the most heavily competed spaces when it comes to technology. Brands across the board are rushing to get a share of the revenue pie that this segment generates. Some brands, like BoAt, Boult Audio, OnePlus, and the like, have introduced some truly quality products in this space. Entering this segment with their line of TWS earbuds is Honeywell, and I got the Honeywell Trueno U5100 ANC earbuds to take out for a spin. When it comes to the design of the

buds, I believe Honeywell tried their best to match up to the price tag that these buds come with. Within a thousand rupee range of these buds, there

are some really high-quality offerings out there. And I believe they did a decent job at ensuring that the consumers are getting the most out of the 3.5k rupees that they spend on the Honeywell Trueno U5100.
