Apple launching iOS 18 beta version soon

Every major tech company that we know of has stepped into the ring of AI. The one that is lagging behind is Apple. Well, it did show us something during its iPad 'Let Loose' event but there's a long way to go. The California-based tech giant is all set to host its annual WWDC 2024 in June. It is

expected that Apple will announce its AI revolution during the event. But will it? Seems like Apple is hitting various roadblocks on the way. We now hear rumours that Apple will only launch AI features in the iOS 18 beta. Reports suggest that Apple is facing roadblocks with the AI revolution. Now, the company is planning on just releasing the AI features as a part of a Beta version of iOS 18. <https://bit.ly/4aSBRCW>

Enhanced Security with Intel Core™ Ultra Processors

Protect Your Business with Advanced Security Features

In an increasingly digital world, security is more important than ever. Intel Core™ Ultra processors provide advanced security features to protect your business data and operations, ensuring peace of mind in a complex threat landscape.

- **Power Efficiency:** Experience up to 40% lower processor power consumption, achieved through enhancements in microarchitecture, manufacturing processes, packaging technology, and power management software.
- **Artificial Intelligence:** The AI-optimized architecture supports advanced features and commercial

applications, improving user experience and collaboration.

- **Platform Protections:** Intel® Threat Detection Technology and the Intel® Silicon Security Engine incorporate advanced security measures to protect against sophisticated threats.
- **Device Management:** Intel® Device Discovery facilitates efficient device management, allowing seamless interaction with cloud services and tools for better data collection and decision-making.

By leveraging the capabilities of Intel Core™ Ultra processors, businesses can achieve new levels of

efficiency, security, and productivity. Embrace the future of commercial computing with Intel's latest innovations. Backed by a robust portfolio of security technologies and a brand verification program, the Intel vPro® platform delivers unparalleled capabilities to organizations of all sizes. From dynamic root of trust to in-band manageability plug-ins, Intel vPro Enterprise systems offer comprehensive features designed to meet modern business needs.
