

Infinix GT 20 Pro

A Stylish, Gaming-Focused Mid-Ranger

The Infinix GT 20 Pro offers a blend of unique features tailored for gaming

enthusiasts at an accessible price point. With its sleek design, boasting a futuristic aesthetic, the GT 20 Pro sets itself apart visually. But does its performance match its aesthetics?

Join us as we delve into a comprehensive review of the Infinix GT 20 Pro, revealing its strengths and weaknesses to determine if it's the right choice for your needs. We'll assess its performance, usability, and overall value to help you make an informed decision.

BUILD & DESIGN

The Infinix GT 20 Pro gives a sense of a premium phone with its sleek and modern design. The phone's back feels smooth and sophisticated. However, it catches fingerprints easily without the case.

This gaming-focused smartphone comes in three colours: Mecha Blue, Mecha Orange, and Mecha Silver.

I had the opportunity to review the Mecha Blue variant. This shade is not overly bright, but rather a muted, elegant blue, giving it a dynamic and refined appearance.

The camera module on the back houses three rear cameras and an LED flash, arranged in a minimalist design that adds to the phone's sleek profile.

One standout feature is the RGB lighting strip on the back, which adds a gaming-centric touch. This customizable light strip can be programmed to notify you of incoming calls and other alerts, enhancing both aesthetics and functionality. The camera module is slightly raised, but it integrates smoothly with the overall design, avoiding any cumbersome protrusion. Overall, the Infinix GT 20 Pro is a

₹27,999

stylish device with an aesthetic look, making it an appealing choice for both gamers and general users.

DISPLAY

The Infinix GT 20 Pro features a 6.78-inch AMOLED display with FHD+ resolution, delivering a visually

immersive experience that is perfect for gaming and content consumption. One of the standout features of this display is its brightness. Even in direct sunlight, the screen remains exceptionally bright, ensuring you can comfortably use your phone outdoors without straining your eyes.

I tested the brightness using the Lux Meter on the Infinix GT 20 Pro's display and the smartphone showcased 1,900 nits of peak luminance under direct sunlight, which is really impressive.

The GT 20 Pro also boasts a 144Hz refresh rate, which enhances the fluidity of browsing, gaming, and overall navigation. This high refresh rate makes scrolling through social media, playing fast-paced games, and even

simple tasks like opening apps feel incredibly smooth and responsive.

You also get support for HDR, and from what I have seen on YouTube, the phone is great for watching your favourite movies or series.

PERFORMANCE

The Infinix GT 20 Pro is powered by the MediaTek Dimensity 8200 Ultimate chipset. There is also a dedicated display chip.

The Infinix GT 20 Pro comes in two configuration options: 8GB RAM + 256GB storage and 12GB RAM + 256GB storage. While the 256GB storage is ample and should meet the needs of most users, it's important to note that the GT 20 Pro lacks a microSD card slot, so the internal storage is all you get. In my day-to-day usage, the Infinix GT 20 Pro maintained consistent performance. Throughout my time with the smartphone, I never encountered any slowdowns or lag. Whether it was multitasking with multiple apps or swiftly switching between them, the GT 20 Pro proved to be a reliable companion.

Gaming on this device was particularly enjoyable. The games were not lagging even during long sessions. However, during extended gaming sessions, I did notice the device getting warm. While my personal experience offers valuable insights into the smartphone's performance, objective benchmarks provide a clearer picture of where the GT 20 Pro stands. I ran several benchmarks on the Infinix GT 20 Pro phone, which I'll discuss next.

On AnTuTu, the Infinix GT 20 Pro scored 943606 points, outpacing competitors like the OnePlus Nord CE4 and Nothing Phone (2a).

On Geekbench, the Infinix GT 20 Pro achieved 1000 points in the single-core test and 3424 points in the multi-core test. These scores position it competitively within its price range.

For the review, I also received a gaming kit with the Infinix GT 20 Pro, which includes a GT Cooling Fan, Mecha Case, and Finger Gloves. The
