

Infinix Note 40 Pro 5G

A Stylish Blend of Innovation & Compromises

In the realm of mid-range smartphones, the Infinix Note 40 Pro 5G emerges as a compelling contender, offering a blend of unique features at an accessible price point of ₹. With its sleek design, boasting a vegan leather back and an AMOLED display, the Note 40 Pro 5G sets itself apart visually. But does its performance match its aesthetics?

Equipped with a MediaTek Dimensity 7020 chipset, this device promises seamless multitasking and fluid user experience. However, it's not all about the internals—the Note 40 Pro 5G introduces intriguing innovations like Active Halo Lighting and MagCharge wireless charging.

But how does it fare in important areas like camera performance and battery life? Join us as we delve into a comprehensive review of the Infinix Note 40 Pro 5G, revealing its strengths and weaknesses to determine if it's the right choice for your needs.

BUILD & DESIGN

The Infinix Note 40 Pro 5G looks and feels premium. The phone's back is made out of what Infinix calls "vegan leather," which feels sophisticated and doesn't attract fingerprints as easily as glass would.

This smartphone comes in two colours: Titan Gold and Vintage Green.

I got the Vintage Green variant for review. It's not a loud, in-your-face green, but more of a muted, sophisticated tone that looks almost earthy.

The frame is painted gold to complement the golden rectangular camera module on the back. The rectangular camera module houses three rear cameras and a circular LED flash

surrounding Active Halo Lighting. This Active Halo Lighting, powered by AI, is claimed to be a segment-first feature. It is a customisable multi-colour light which serves as a notifier for various notifications including incoming calls, messages, and more. The camera module itself is raised slightly from the back of the phone, but it doesn't jut out too much.

The Infinix Note 40 Pro 5G has a curved display, which curves gently at the edges for a more comfortable hold. The Note 40 Pro 5G has an IP53 rating for dust and water resistance. Gorilla Glass is there to protect the display, offering some peace of mind from scratches and bumps.

Overall, the Infinix Note 40 Pro 5G is a stylish and well-designed phone that looks and feels premium.

DISPLAY

The Infinix Note 40 Pro 5G boasts a 6.78-inch AMOLED display with FHD+ resolution, and let me tell you, it's a real treat for the eyes, especially when watching content. The viewing angles

were also excellent, no matter how I held the phone.

Now, let's talk about that smooth scrolling. This phone boasts a 120Hz refresh rate, which makes browsing social media incredibly fluid.

Infinix advertises the display reaching a peak brightness of 1300 nits. However, I only managed to get 965 nits in my tests under harsh sunlight with Adaptive Brightness on. It's still decent for most situations.

PERFORMANCE

The Infinix Note 40 Pro 5G smartphone is powered by the MediaTek Dimensity 7020 chipset which has two Cortex-A78 cores clocked at 2.2 GHz and six Cortex-A55 efficiency cores clocked at 2.0 GHz. You also get 8 GB LPDDR4X RAM and 256 GB of UFS 2.2 storage onboard. While the 256GB storage is ample and should meet the needs of most users, it's worth noting that there's no option to expand it further due to the absence of a microSD card slot.

In my day-to-day usage, the Infinix Note 40 Pro 5G maintained consistent performance. Throughout my time with the smartphone, I never encountered any instances of it feeling slow or lagging behind. Whether it was multitasking with multiple apps or swiftly switching between them, the Note 40 Pro 5G proved to be a dependable companion during the two weeks or so that I used it. However, it's worth mentioning that while playing one of my favourite games, BGMI (Battlegrounds Mobile India), I frequently experienced accidental touches. Additionally, due to the phone's curved display, I often had to tap multiple times to select an option located on the curved edges within the game.

Moreover, the phone is equipped with an AI assistant named Folax. This assistant is capable of assisting with various tasks, including making calls, capturing photos, playing music, setting alarms, and much more.

While my personal experience offers insights into the smartphone's performance, it's essential to consider objective measures as well. I conducted
