

several benchmarks on the Infinix Note 40 Pro 5G, which I'll discuss next.

The Infinix Note 40 Pro 5G displayed relatively underwhelming performance metrics when compared to other smartphones in its price range. In AnTuTu tests, the Infinix Note 40 Pro 5G recorded a score below 50,000, trailing behind competing devices like the Realme Narzo 70 Pro 5G and the Nothing Phone (2a).

On Geekbench, the Infinix Note 40 Pro 5G achieved 917 points in the single-core test and 2269 points in the multi-core test. Although these scores are lower than those of its competitors, they aren't significantly lagging behind.

CAMERA

Let's dive into the camera system on the Infinix Note 40 Pro 5G. First, let's talk about the rear-camera setup. On the back, we have a triple-camera setup, but unlike most phones these days, there's no ultra-wide lens. You get a 108MP main sensor with optical image stabilisation (OIS), a 2MP depth sensor and another 2MP macro sensor.

In good lighting conditions, it captures decent photos. There's a good amount of detail, and colours are nice and vibrant without being oversaturated. However, the camera struggled with balancing exposure in some situations, particularly when shooting people in direct sunlight.

Things get a bit trickier in low-light situations. Don't get me wrong, the phone has a Super Night mode, and it actually works pretty well. It brightens up night shots considerably and manages to salvage some detail that would otherwise be lost in the shadows.

Overall, the rear-camera system on the Infinix Note 40 Pro 5G is decent. The 108MP main sensor takes good photos in good lighting and the Super Night mode does a surprisingly good job in low-light. Just keep in mind the lack of an ultra-wide lens.

Stepping over to the front, the Infinix Note 40 Pro 5G sports a 32MP selfie camera. In good lighting, you can expect clear selfies. However, the low-light

performance isn't the strongest. While there is a screen flash to help brighten things up in low-light situations, image quality suffers.

BATTERY & CHARGING

That's where the phone gets interesting – Charging. The Infinix Note 40 Pro 5G packs a 5,000mAh battery, which is pretty standard for a phone. In my daily use, which involved a mix of social media browsing, web browsing, YouTube, and some light gaming, I was able to easily get through a full day on a single charge.

The phone supports 45W fast charging, and during my testing, it took about 69 minutes to fully charge the phone from 0 to 100%. I played Call of Duty: Mobile for 15 minutes and only saw around 4% drain. One hour of using Google Maps only drains the battery by 6 per cent.

Here's the coolest part: Infinix is jumping on the magnetic charging bandwagon with their own MagCharge system. A special back cover comes with the phone. A magnetic coil is placed within the case to place the device in the correct position on the Infinix MagPower for wireless charging. For context, Infinix MagPower is a 3,020mAh magnetic power bank that snaps onto the back cover of the phone for a quick on-the-go charge up. It's not the most

powerful option, but it's definitely handy if you're caught out and about with a dying phone.

I must say that the inclusion of the Magnetic charging solution is a neat addition, especially for the price point.

VERDICT

The Infinix Note 40 Pro 5G is a good option if you're on a budget and want a phone with some unique features. It's got a classy design with a vegan leather back and a curved display that's great for watching videos. The battery life is pretty solid, and it comes with a magnetic charging system that's handy in a pinch.

However, there are some things to keep in mind. The camera system is decent and there's no ultra-wide lens which some people like to have. Also, while the phone can handle most everyday tasks, don't expect it to be a gaming powerhouse.

Overall, if you're looking for a stylish phone with a big screen, long battery life, and some cool features like magnetic charging and AI Halo Lighting, the Infinix Note 40 Pro 5G is a good choice for the price. But if you're a big gamer or need the best camera on the market, you might want to look elsewhere.
