

STUDENT

TREADING A FINE LINE

USE CASES FOR STUDENTS

1. ACADEMIC RESEARCH:

In the digital age, academic research can be overwhelming due to the vast amount of information available. AI can help streamline this process. For instance, **Google Scholar** and **Semantic Scholar** are AI-powered tools that can search through millions of academic papers to find the most relevant and recent ones. To use these tools, students can simply enter their research topic into the search bar, and the AI will do the rest. It's also possible to set up alerts for when new papers on a specific topic are published.

2. PERSONALISED LEARNING:

Every student learns differently. Some are visual learners, while others prefer reading or hands-on activities. AI can adapt to these individual learning styles. **Knewton** is an AI-powered educational platform that provides personalised learning experiences. It adapts to each student's pace, ensuring they fully understand a concept before moving on to the next. Students can sign up for Knewton and take a diagnostic test to determine their learning style, and the AI will tailor the content accordingly.

3. WRITING ASSISTANCE:

Writing is a crucial skill for students, but it can be challenging. AI can provide real-time feedback on grammar, punctuation, and writing style, helping students improve their writing skills. Tools like **Grammarly** and **Hemingway Editor** not only correct mistakes but also explain the reasoning behind their suggestions, promoting learning. Students can install these tools as browser extensions or apps and use them while writing.
