

New chapter unfolds

As we celebrate 23 incredible years of Digit, we're filled with a sense of pride and accomplishment. But we're not just looking back – we're also igniting a new spark that will fuel our future. Digit and its properties are now a part of the Times Network.

It's like acquiring superpowers! Our tech expertise, combined with Times Network's muscle, gears us up to make a bigger impact in the tech industry. We're still the same passionate, quirky, and slightly sarcastic bunch of tech enthusiasts who want to make a difference. But now, we have a bigger canvas to paint our masterpiece. We can touch more hearts and solidify our position as a leading voice in the tech industry.

Our first step into this larger canvas is the Digit Tech Show on Times Network's vast TV and radio platforms. We're expanding our reach to a wider audience, poised to amplify our impact and explore the latest tech developments, AI, and more. We'll dive deep into the world of tech, expose planned obsolescence, and maybe even debate the ethics of creating a sentient coffee machine (because, let's face it, AI is taking over the world!).

We envision the Digit Tech Show (name is a placeholder; suggestions are welcome) as a space where you can unapologetically call out the egregious practices of capitalist tech companies. You can share your thoughts on the AI frenzy, and join the conversation. Our goal is to make the show your voice, your arena – unwaveringly unbiased, objectively scientific, and grounded in the realities of the Indian tech landscape. As we embark on this new journey, we'd love to hear your ideas and thoughts on how we can make the Digit Tech Show different, impactful, and meaningful. Write to me at soham@digit.in with your suggestions on the show's name, format, and content. Honestly, your suggestions are of paramount importance to us. We want to create a show that resonates with you.

What else is new as we turn 23? Well, we're going to be testing AI devices to separate the chalk from the cheese. Digit's AI scoring system is coming in June! It's our pursuit to develop the ultimate benchmark for AI per-

“Here’s to many more years of innovation, disruption, and tech excellence! Thanks for being an integral part of the Digit family.”

Editor-in-Chief

formance! In a world where AI is transforming devices, understanding a device's AI capabilities is crucial.

Our comprehensive benchmark evaluates AI performance rigorously, running over 80 AI models and examining 180 aspects of AI performance, including speed, accuracy, and initialisation time. From object recognition to natural language processing, our tests cover it all. We are pushing the limits of AI performance to empower you to make informed decisions when buying your next AI-capable device. We're calling it the Digit AI-Q. The Digit AI Quotient takes into account objective benchmarks that can bring the NPU to its knees while also judging the real-world qualitative performance of AI software tricks.

And that's not all. We're also launching our brand-new Digit Home Appliance testing lab, putting ACs, washing machines, refrigerators, water purifiers, coffee machines, and many more appliances through rigorous testing. We'll provide you with the most authoritative reviews and ratings in India, helping you make informed decisions about the tech you bring into your home.

So with that said, here's to many more years of innovation, disruption, and tech excellence! Thanks for being an integral part of the Digit family – and for putting up with our nerdy humour. We're excited about this new chapter, and we hope you are too! **d**
