

FOR CONSUMERS:**1. OUTFIT PLANNER:**

AI can suggest outfits based on the consumer's existing wardrobe, occasion, weather, and personal style. This can help consumers make the most of their wardrobe and discover new outfit combinations.

3. SUSTAINABLE SHOPPING:

AI can provide information about the sustainability of different products, helping consumers make environmentally friendly choices. Tools like Good On You rate brands based on their sustainability.

2. STYLE ADVICE:

AI can provide style advice based on current trends, occasion, weather, and personal style. Tools like Amazon Echo Look provide AI-powered style advice. Consumers can use these tools to get style advice tailored to their needs.

4. PRICE OPTIMIZATION:

AI can track prices across different online stores and alert the consumer when the price of a desired item drops. Tools like Honey and CamelCamelCamel offer price tracking and alerts. Consumers can use these tools to save money on their purchases.

5. PERSONALIZED RECOMMENDATIONS:

AI can analyse a consumer's past purchases, browsing history, and preferences to recommend clothes that they might like. Tools like True Fit provide personalised fit and style recommendations. Consumers can use these tools to discover new clothes that match their style and fit preferences, saving them time and effort in shopping.

These are just a few examples of how AI can revolutionise the fashion industry, making it more efficient, sustainable, and personalised. However, it's important to remember that while AI can provide valuable insights and automation, the creativity and vision of human designers and the personal touch in retail are irreplaceable. AI should be seen as a tool to enhance human capabilities, not replace them.
