

DIGITAL MUSICIAN

HITTING THE RIGHT NOTES

USE CASES FOR MUSIC PRODUCERS

1. SOUND MIXING:

AI can assist in mixing tracks by automatically adjusting levels, EQs, and effects. **iZotope's Neutron** and **LANDR** can learn from human-made mixes and apply similar techniques. To use these tools, you would input your tracks, and the AI would generate a mix.

2. MASTERING:

AI can assist in mastering tracks by automatically adjusting the final mix's dynamics, tone, and loudness. **LANDR** and **iZotope's Ozone** can do this. To use these tools, you would input your final mix, and the AI would generate a master.

3. AUDIO RESTORATION:

AI can assist in restoring old or damaged audio recordings. **iZotope's RX** can remove noise, clicks, and pops. To use this tool, you would input your damaged audio, and the AI would generate a restored version. You can then adjust this restoration as needed.

4. VOICE TUNING:

AI can assist in tuning vocals. **Celemony's Melodyne** and **Antares Auto-Tune** can automatically correct pitch and timing errors. To use these tools, you would input your vocals, and the AI would generate a tuned version. You can then adjust this tuning as needed.

5. MUSIC RECOMMENDATION:

AI can assist in recommending new music. **Spotify's Discover Weekly** and **Apple Music's For You** can recommend music based on your preferences and history. To use these tools, you would listen to music, and the AI would generate recommendations.

6. MUSIC ANALYSIS:

AI can assist in analyzing music. **Mixed In Key** and **Ableton Live's** audio analysis features can analyze elements like key, tempo, and structure. To use these tools, you would input your music, and the AI would generate an analysis. You can then use this analysis to make informed decisions.
