W

e recently got the opportunity to conduct an engaging interview with Shivam

Ranjan, the Head of Marketing at Motorola - Asia Pacific. Ranjan shared his insights on the transformative role of artificial intelligence (AI) in consumer technology, leveraging partnerships such as Pantone and Bose in its smartphone and audio products, and fixing issues associated with past Motorola products.

He explains the company's strategic initiatives to stay ahead in the competitive market and discusses the broader implications of AI advancements for consumers. Additionally, the interview covers future plans for Motorola and their quest to gain momentum in the offline market. By unpacking these themes, we gain a deeper understanding of how Motorola is navigating this dynamic field. Let's delve right into it.

Q Motorola has entered the TWS space in India with the Moto Buds and the Buds Plus. How does Motorola plan on getting a competitive edge in this segment?

A Let me take a step back before I answer your question to talk about the vision and, the strategy behind doing this. As you know, Motorola has been growing fast, globally and in India, and we have seen tremendous growth in our smartphone portfolio. So if you look at our smartphone portfolio, we are present in premium, flagship and budget segments. So, we're catering to different product segments and giving them a very, very comprehensive and, innovative, smartphone experience. But I think it is also important along with, smartphones, to have, an ecosystem of products. Specifically, when you talk about audio, I think that's become something that's become synonymous, along with the phone. Because people are consuming content on their smartphones all the time. Hence we wanted to enter this category because I think it made sense from a lot of perspectives to give our consumers the choice.

But as an industry, the audio space is already cluttered. You've got two kinds of players in the industry, one who are smartphone OEMs and the other is a set of brands that operate only in audio products. So there are both kinds of products. Since we are entering this category after a while, it's important for us to also have the learnings of the industry in terms of what makes for good sound, what are the certifications, etc. So, I think our approach has always been to believe in partnerships, to leverage partnerships and to collaborate with partners with those who are experts in their respective fields. So, if you look at our smartphone portfolio today, it's known for its designs, it's known for brilliant colours. And that comes from our partnership with Pantone, who is a global leader in colour science. Now, in the audio space, the biggest thing is we partnered with Bose and our collaboration with Bose started last year. So, it began
