■ NVIDIA

Jensen Huang led NVIDIA reaches the stars!

The tech world has seen a massive shift in the pecking order of the most valuable companies. NVIDIA, has dethroned Microsoft to become the top player, with a market cap surpassing \$3.3 trillion (₹3.7 lakh crore) as of June 18, 2024. What's driving NVIDIA's dominance? Of course there's a whole lot of AI, but NVIDIA's cooking a lot more. Let's dive in and find out.

AI and Machine Learning boost

NVIDIA's GPUs are at the heart of the world and India's booming artificial intelligence (AI) industry. According to a NASSCOM report from 2023, the Indian AI market is expected to hit ₹1.8 lakh crore by 2025. NVIDIA's GPUs, known for their unparalleled parallel processing capabilities, are the best in the business for complex AI algorithms used everywhere — from Aadhaar's facial recognition to advanced medical diagnostics. Major Indian cloud providers like TCS Ion, Jio Platforms and Yotta rely on NVIDIA's Tesla series GPUs to deliver top-notch AI services — with some even starting their shift to NVIDIA's more powerful A100 and H100.

NVIDIA's role in the crypto craziness

The rise of cryptocurrencies like Bitcoin and Ethereum has boosted the demand for powerful GPUs all over the world, especially in the last decade. Here again, NVIDIA's efficient architecture makes their GPUs ideal for crypto mining. Exactly how much NVIDIA has made from selling GPUs to crypto miners is anyone's guess, as the company never listed mining as a separate revenue stream, lumping it under the gaming segment. But make no mistake, it was no small change. <https://bit.ly/4cE2ehs>

■ TESLA

Elon Musk's crazy vision for Tesla Optimus robots

At a recent shareholder meeting, Elon Musk dropped some major bombshells about Tesla's future, and it's all about humanoid robots. Yep, you heard that right. If you're into tech and Elon Musk's wild plans, you're going to love this. Here are the top things you need to know about Musk's vision and what it means for Tesla and the world.

Tesla's Optimus robots are coming very soon

Elon Musk is betting big on Tesla's Optimus humanoid robots. He's so confident that he says these robots could make Tesla worth \$25 trillion someday. That's more than half of the total value of the S&P 500! Musk believes these robots will be a game-changer, performing everything from factory work to everyday chores like cooking and cleaning. He's even hinted that Optimus robots could be teaching kids in the future. Talk about ambitious!

Elon Musk

Humanoid robots will start working in Tesla factories by 2025

Musk revealed that Tesla plans to start using Optimus robots in its factories by next year. He's expecting over 1,000 of these robots to be working in Tesla's factories, helping with various tasks. Imagine walking into a Tesla factory and seeing robots doing a lot of the work. It's like a scene straight out of a sci-fi movie. This is just the beginning, as Musk sees a future where robots will be manufacturing other robots.

Huge market for humanoid robots, says Elon Musk

According to Musk, the market demand for humanoid robots could reach 1 billion units per year. Tesla is aiming to capture about 10% of that market. If they manage to sell 100 million robots annually at around \$20,000 each, that's a trillion dollars in profit every year. Musk believes this will add a massive \$20 trillion to \$25 trillion to Tesla's market cap. And get this, he predicts that the cost to make these robots will eventually be less than making a car, around \$10,000 per unit. <https://bit.ly/3RKFzrH>
