

Vivo X Fold 3 Pro

Redefining refined foldables

After teasing us for a good 3 years, Vivo has finally brought its foldable series of smartphones to India! The Vivo X Fold 3 Pro is the first foldable from Vivo to make it to the Indian market and it is safe to say that I was super excited to try out this smartphone. The Vivo X Fold 3 Pro, goes a step ahead and takes good care of the whole bulk and thickness. This made the Vivo X Fold 3 Pro naturally, one of the devices that lured me into putting my SIM in it and since the last few days, I have been using it as my primary smartphone. And boy, do I have some thoughts. So without much further ado, let's get into it:

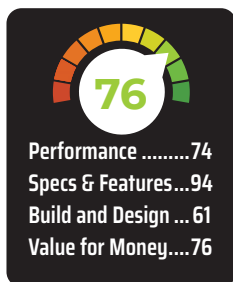

DESIGN

Like always, I will let the Vivo X Fold 3 Pro's design take the lead. First and foremost, the form factor. Like I said, this is the slimmest foldable smartphone out there. The Vivo X Fold 3 Pro is very easy to use and it fits in my pockets very comfortably. Unfolded, this smartphone is only 5.2mm thick. This is even thinner than the latest M4 iPad Pro from Apple. Yes, the 5.2mm thickness does make the smartphone feel very fragile, but I got used to it very quickly.

Now let's talk about when the smartphone is folded. Here, it gives a similar in-hand feel to a normal smartphone. The aspect ratio is still thinner than a conventional smartphone, but it's negligible and everything works as it would on a regular glass slab device. The screen is curved, but it curves slightly more on the right side of the screen. Over and above, we are also getting IPX8 water resistance with the Vivo X Fold 3 Pro along with Schott Xensation scratch resistance at the front.

The design of the Vivo X Fold 3 Pro is well thought of and it is quite a refined take on a foldable smartphone in terms of the design. It is slim, easy to use and fit in pockets,

₹1,59,999

which itself is a pretty decent feat. There are no gaps and the hinge feels super durable. Yes, it does feel fragile when unfolded. Yes, the round camera module doesn't look the most aesthetic, but those seem to be nitpickings given how well everything else works and looks.

DISPLAY

Coming to the display, first I will talk about the front panel. On the face, the outer display is as good as any other flagship. It is bright, it is sharp, and it is super responsive. This display is also extremely colour accurate. In our colour checker test, the Vivo X Fold 3 Pro showcased an average Delta E of 0.8, which means that the colours represented by this display are very close to the actual colours. In our greyscale test, the Vivo X Fold 3 Pro tracked gamma 2.2 very consistently while displaying a good RGB balance. The blue is slightly blown up as compared to the red and green.

Coming to the inner foldable display, it is also bleeding edge in terms of the specifications. We get an 8-inch LTPO

AMOLED display with a 120Hz refresh rate. The Vivo X Fold 3 Pro's main display is very smooth and responsive. Of course, being a UTG (Ultra-thin glass), it isn't as vibrant as the outer display, but that's not always bad.

In terms of the colour accuracy, here also, I got a DeltaE of 0.8, which showcases the colour representation capabilities of this display. Along with that, the Greyscale results are also very good and in-line with the display tuning that Vivo has done on the outer display.

PERFORMANCE

Performance-wise, of course, this is a flagship so we are getting enough power and might with this smartphone to run all apps and games. Even multi-tasking is effortless on this device.

The smartphone scored over 2 million points on AnTuTu. In Geekbench, the smartphone performed much better than I expected, with a single core score of 2061 and a multi-core score of 6259. This is higher than most flagships of 2024 including the Samsung Galaxy S24 Ultra, the OnePlus 12, and the likes. The Vivo X Fold 3 Pro, however, fell just short of its smaller sibling, the Vivo X100 Pro.

In GPU benchmarks, the story is slightly different. While it matches up to all competitors in terms of the numbers, the Vivo X Fold 3 Pro fell short as compared to some competing devices like Xiaomi 14, Samsung Galaxy S24 Ultra, OnePlus 12, and the likes. This is in benchmarks like 3D Mark Wildlife Extreme and GFXBench.

I absolutely loved multitasking on the Vivo X Fold 3 Pro. And despite my disliking of Vivo's FunTouch OS, this smartphone has many features and optimisations that other foldables can also use.

Vivo has also optimised some of the most common apps to work seamlessly on the bigger screen, which is a great move. However, there are a few bugs here. On top of that, there are the browser and V-app store notifications which are just annoying if you don't turn them off.

While we are at performance, it is also important to mention the storage speeds, which have been one of the highest on the Vivo X Fold 3 Pro so far.
