

bang for your buck with this processor. The SSD and RAM is where Colorful have made some sacrifices. Or rather, we'd say the SSD and RAM are more inline with its actual price. It doesn't compare to laptops that cost over a lakh which have substantially faster SSDs and RAM. However, Colorful have allowed for easy expansion and upgradeability, which is great. Finally, we come to gaming performance. Let's start things off with the synthetic numbers. We use the 3DMark benchmark for this.

The scores we saw were among the highest we'd seen in laptops up to the Rs 1.5 lakh price point. Easily in the top two or three if not the best score. Essentially, in terms of gaming perfor-

mance this laptop can be compared to laptops that are nearly double its price.

However, all of that means nothing if real world gaming performance is weak. So let's get to that next.

Once again, like with the synthetic benchmarks above we saw the Colorful scoring high across the board. The only games where it wasn't able to score the highest benchmark numbers was CPU intensive titles. Here, laptops with newer and more powerful processors took the lead. That said, the scores are still excellent. Thanks to the presence of the RTX 4060, you can also use DLSS for games that support, and easily game at QHD+, which is the laptop's native resolution. I honestly did not expect to see a gaming laptop under 1

lakh that can easily game at QHD+, at least not this soon.

## THERMALS

The Colorful EVOL P15's cooling solution is called the "Deep Chiller System". This includes a dual-fan setup and 6 cooling pipes to keep internals cool. We can vouch for the internals running cool; the CPU remained at a cool 65 degrees Celsius during our CPU stress test. Meanwhile, the GPU never crossed the 78 degrees Celsius mark after hours of intense gaming and testing. However, this doesn't translate to cool surface temps. Some areas of the surface, especially the WASD and IJKL cluster can get pretty toasty, sitting north of the 43 degrees Celsius mark. The fans also get pretty loud when you start any intensive workloads. They're clearly doing their job though, but you might want to keep that in mind if you need a quieter gaming laptop.

## VERDICT

The Colorful EVOL P15 emerges as a formidable budget gaming laptop, offering the powerful NVIDIA RTX 4060 GPU at an astonishingly affordable price of Rs 84,999. Its vibrant 15.6-inch QHD+ display with impressive colour accuracy make it a standout choice. The laptop's performance is commendable, with the Intel Core i7-12650H processor and RTX 4060 GPU delivering excellent gaming and productivity results. Despite some trade-offs in SSD and RAM speeds, the EVOL P15's upgradeability and solid internal thermals with the "Deep Chiller System" ensure it punches well above its weight, making it an attractive option for gamers and creative professionals on a budget.
