

for a plastic construction that, though smaller compared to the increasingly oversized touchpads that have become somewhat standard in recent releases (the Samsung Galaxy Book 3 Ultra being a case in point), still capably handles navigation within Windows 11. That said, in the realm of gaming where precision is paramount, my preference was towards a wireless mouse when I was using the Legion Pro 5i.

DISPLAY

The Lenovo Legion 5i Pro 2023 gaming laptop features an expansive 16-inch display and a resolution of 2560 x 1600, all framed within a 16:10 aspect ratio, and enhanced by a 240Hz Hz refresh rate. The goal? To provide an excellent visual experience.

Transitioning to the more technical side of things, a comparison with the previous Gen 7 model reveals some adjustments Lenovo has made in the Gen 8 variant. According to my readings, the Legion Pro 5i achieved a peak brightness of around 540 nits, making it one of the brightest laptops in its segment. Moreover, the Legion 5i Pro maintained commendable scores in both the sRGB and DCI-P3 color spaces, registering at 106.4% and 78.2% respectively.

The Legion 5i Pro's display also has a very high degree of colour accuracy. During the Calman ColorChecker analysis test, the laptop's display scored an Average Delta E value of 1.3. For context, this value is inversely proportional to the display. And the maximum Delta E value is 2.4, making the Legion 5i Pro's display one of the best in its segment in terms of colour accuracy.

To conclude, it's clear Lenovo has successfully elevated the display capabilities in their transition from the previous generation to the Legion Pro 5i.

PERFORMANCE

Performance is one of the main reasons why you could consider buying this machine. Let me talk about some numbers – 19133 Multicore scores in Cinebench R23, 8665, and 20133 in 3d Mark's TimeSpy and Firestrike. For

reference, here are its CPU and GPU benchmarks in comparison with the MSI GL66 and HP Omen 16. The Legion 5i Pro easily beats both of them.

The Lenovo Legion 5 Pro flexes its robust mid-tier specifications, boasting an Intel Core i7-13700HX processor with an aggregate of 16 cores – eight Performance and eight Efficient ones – reaching a maximum clock speed of 5GHz. This powerhouse couples with 16GB of DDR5 memory and a 512GB solid-state drive.

As you're undoubtedly aware, the Lenovo Legion 5i Pro is equipped with high-performance components that consume considerable power. Consequently, after extended periods of gaming, it's not unusual to observe a significant rise in the laptop's surface temperature. Moreover, with an initial PCMark 10 score of 9424, the Lenovo Legion starts on a strong footing. Though this score may not shatter records, it's indeed commendable and situates the Legion 5 Pro amongst the top mid-tier gaming laptops, demonstrating its potential for impressive overall performance.

The performance of the RTX 4060, while not a top-of-the-line GPU, is still robust enough to tackle most modern 3D titles at high settings, ensuring a satisfying gaming experience. It is noteworthy that the laptop was able to recover and sustain high frame rates in Shadow of the Tomb Raider without Nvidia's DLSS technology turned on. But its performance in games like Metro Exodus positions RTX 4060 as a less significant upgrade compared to last year's RTX 3060.

Overall, the Lenovo Legion 5 Pro's real-world gaming performance should satisfy most mid-tier gamers. The gaming experience is generally smooth and enjoyable, especially for those who value high frame rates and are ready to make some minor concessions on the highest possible settings for the most demanding titles.

VERDICT

In the world of gaming laptops, the Lenovo Legion 5i Pro, priced at Rs 186,837, stands out as a significant player. Much

like the Tesla Model 3 in the realm of electric vehicles, the Lenovo Legion 5i Pro is a high-performance machine that presents an intelligent blend of design, functionality, and value for money. It's a well-built, robust laptop, delivering a commendable gaming performance at 1440p 60FPS and higher. The device is powered by an Intel Core i7-13700HX processor, paired with an Nvidia GeForce RTX 4060 graphics card, 16GB DDR5 memory, and a 1TB SSD, presenting itself as a substantial contender in the mid-tier gaming laptops. Although the laptop's base model only comes with a 512GB SSD you can upgrade it to 1TB and other specifications on Lenovo's official website as well.

The laptop's chassis, built with a precise CNC aluminium lid and sturdy, heat-resistant PC-ABS body, exudes strength and durability. Coupled with its connectivity prowess, which includes two USB-C ports, three USB-A ports, an HDMI 2.1 port, an Ethernet port, and wireless capabilities, the laptop sets a high bar for versatility. The quality continues with a pleasing keyboard experience and an expansive 16-inch 240Hz display with excellent color accuracy and brightness. Although the RTX 4060 GPU may not be the most advanced on the market, it is more than capable of providing a smooth and enjoyable gaming experience across most modern 3D titles. Despite the significant power consumption and resultant heat output, the laptop maintains impressive performance, positioning the Lenovo Legion 5i Pro as a compelling option for mid-tier gamers in 2023.
