

In CPU-based benchmarks, the iQOO Z9X 5G showcased numbers on the same level as the Motorola Moto G64, the Realme P1, and the Poco X6 Neo, falling just short in the numbers as compared to the Moto G64 and the Realme P1 (which is more expensive).

In GPU tests also, the iQOO Z9X 5G holds its own. The smartphone trumps most of the competing devices in GPU tests. While gaming also, the iQOO Z9X 5G showcased consistent performance and doesn't heat up too much as well. The smartphone also showed no signs of throttling when I ran the CPU throttle test.

So performance-wise, this is a typical iQOO smartphone, showcasing superior performance in its budget and matching up with more expensive devices in the market.

CAMERA

We get a 50MP + 2MP dual rear camera setup with a 50-megapixel primary shooter and a 2-megapixel depth sensor. The camera performance on the iQOO Z9X 5G is just average. The images that come out of this camera are very similar in terms of quality as the elder sibling, the iQOO Z9.

The images are decent for casual usage. You won't be clicking a lot of photos with this camera, but if you do, the images are good enough to upload on social media platforms like Instagram. In ideal lighting, like pretty much all cameras in this range, the iQOO Z9X 5G is capable of taking some very good shots. However, in low light, the smartphone struggles a little. In low light, the images are hazy and don't have a lot of sharp details. Portraits are also decent and nothing special. The edge detection isn't very accurate and at times, it seems a bit too harsh. However, if you try, you can get good portraits from this camera as well.

We also get a 2x in-sensor zoom with the 50MP primary shooter. In 2x, the shots are good and have sufficient details and sharpness. The 2x zoom is very good in the sense that

the images are equally as good as the primary shooter, even in low light.

Overall, this is just a decent camera setup. If you are someone who only cares about the camera, this isn't the best option but if camera isn't the priority, this will do the job just right. Don't get me wrong, taking a very good photo from this is possible, but to make that happen, the user needs a certain level of skill and knowledge.

VERDICT

So the iQOO Z9X 5G is a very 'iQOO' smartphone. It has a brilliant price-to-performance ratio, it looks the part, has great battery backup and charging speeds, and comes with a very good display for the price. The only place where I thought the smartphone struggles is the camera.

But of course, people don't buy iQOO smartphones for their cameras.

What people buy these smartphones is for the gaming and performance, fast charging, good battery backup, and a lightweight build so that gamers can hold the smartphone for longer hours to be able to get to the 'chicken dinner.'
