

also comes in a black and dark grey colour option and a familiar tan leather and aluminium colourway. Out of the three, I like the blue and white, particularly because of the ceramic-like finish on the white part of the Oppo Find X7 Ultra.

The design, as you can tell, is intricate. There are other details as well, like the frame of the camera module, or the copper dot on this frame, which is taken from the legacy camera-maker Hasselblad. Up front, we have the curved display which merges into the metal frames. This year, we also have an alert slider on the Oppo Find X7 Ultra. The alert slider making an entry into Oppo smartphones is surely welcome from me.

Then there are other design and durability features like IP68 dust and water resistance. So the design is overall good. The smartphone, from the moment you first set your hands on it, feels exquisite and premium. There are too many elements here and there to notice as far as the aesthetics and design go.

The phone may be a bit too heavy for some at 424 grams, it may be too big for someone with a 6.82-inch display, but all of that comes together really well in a premium package which doesn't shame away from clearly looking like there is a camera on my phone.

DISPLAY

Now the display on the Oppo Find X7 Ultra is a 6.82-inch LTPO AMOLED display with a 120Hz refresh rate and a 1440p resolution. The screen quality is very good and it is quite bright as well. I tested the brightness of the Oppo Find X7 Ultra's luminance to be 1,450 nits under bright sunlight, which is outstanding and means that visibility won't be an issue, regardless of how bright the environment is.

The display is also pretty immersive. For starters, it is perfectly sharp given the 1440p panel, it is super responsive, thanks to the 120Hz LTPO AMOLED display, and for those who watch a lot of content on their smartphones, it also supports all kinds of HDR formats like HDR 10+, Dolby Vision, HLG, and much more. Further, the smartphone also

comes with a 100% DCI-P3 coverage, which means that the colours are also accurate to some extent.

While I wasn't able to test the colour accuracy of this display objectively, it does seem to be very good in all senses. The curved display is prone to mis-touches every now and then, but apart from that, there is much less to complain here in terms of the display.

PERFORMANCE

Coming to the performance, the Oppo Find X7 Ultra comes with a Qualcomm Snapdragon 8 Gen 3 chipset paired with up to 12GB of RAM and up to 512GB of internal storage. In terms of performance also, this performs like any other flagship. The usage is absolutely smooth, multitasking is an absolute breeze and each and every swipe or movement is buttery smooth.

I faced no issues with how the smartphone performs. Even in games, the Oppo Find X7 Ultra was able to push maxed-out graphics and high frame rates for a long period of time without much issues. Yes, there was a bit of heating and throttling, but it is nothing we haven't seen with other flagships as well.

While it does perform as well as any other smartphone, the benchmark scores of the Oppo Find X7 Ultra fall short of some of the closest competitors. For example, the Xiaomi 14 Ultra and the Vivo X100 Pro were able to score better in CPU and GPU-based benchmarks. There were a few tests that the Oppo Find X7 Ultra was ahead, but overall, it falls short of the competition.

The battery on the smartphone is brilliant. Each time, I was able to get more than 7 hours of on-screen time. This is after using the smartphone extensively. Meaning that the battery is pretty good. Even in our battery tests, the Oppo Find X7 Ultra fared really well. The smartphone only lost 4 percent of its battery while playing Call of Duty: Mobile for 15 minutes. The smartphone only lost 4 percent of the battery while it also played a video on YouTube for 30 minutes on 2160p resolution. In our video loop test, the Oppo Find X7 Ultra survived xx

minutes. The charging is also super fast. We get 100W fast charging and 50W fast wireless charging with the Oppo Find X7 Ultra. The 100W fast charging allows the smartphone to go from 0 percent battery to 100% in just about 41 minutes.

While we are at battery and performance, it is also important to mention the smartphone's security features, since that is something brands like Oppo, Vivo, Xiaomi and the likes are usually criticised for. The Oppo and also comes with a VIP mode (thanks to the alert slider) that shuts off the smartphone's GFind X7 Ultra has a dedicated security chipPS, camera, and mic, making sure that no one is able to track you down or get in your smartphone's camera.

VERDICT

So yes, the Oppo Find X7 Ultra unleashes the true camera potential of Oppo smartphones. It does prove that amid the Vivo X100 series and Xiaomi 14 series' of the world, Oppo should also be taken seriously when it comes to offering a kickass camera. However, the sad truth is that this smartphone will not be launched in India so however much I may like the Oppo Find X7 Ultra, I can't recommend it to anyone in India.

But yes, it does offer a good showcase of Oppo's camera smarts. This smartphone is as good as any other camera smartphone without a doubt. Yes, in every setup there is room for improvement and the Oppo Find X7 Ultra is no stranger to that. But it is, most definitely, one of the most capable camera setups out there currently.

—Darab Mansoor Ali
