

the base up, which helps with airflow and slightly angles the keyboard towards you.

Speaking of the keyboard, the spacing is good and makes for an overall comfortable typing experience. The chiclet keys have low travel distance but offer satisfactory feedback. The backlighting is useful as well. The arrow keys all being squished together is a bit of a hassle to deal with however.

You have a large smooth touchpad, which tracks well. The touchpad also has lights under it. By default, you

have the words **S W I F T** lit up at the bottom. However, the touchpad turns into an action centre when you're watching any kind of media giving you quick access to actions like pause/play fast forward, full screen and more. Definitely a handy feature.

PORTS

Coming to the ports, the Acer Swift 14 Go comes with an audio combo jack, a MicroSD card reader, a kensington lock, and a single USB 3.2 Type-A port on the right side. On the other side, you have

two Thunderbolt 4 ports, an HDMI 2.1 port, and one more USB 3.2 Type A port. So we'd say Acer is very generous with the port offerings here.

WEBCAM

Speaking of the webcam, you've got a nice QHD webcam which can record at 30 FPS. It can utilise the Intel Core Ultra processors' NPU for local AI tasks as well, such as background blur.

BATTERY

During our tests, the Acer Swift Go 14 AI lasted close to 10 hours for general everyday use. Using the PCMark 10 battery benchmark for modern office applications at 100 percent screen brightness, we got a score of 9 hours and 22 minutes which is pretty good. You'll get a lot more use out of it at lower screen brightness, plus the OLED display definitely helps. You should be able to easily use the laptop for an entire day without needing to charge it.

VERDICT

The Acer Swift Go 14 AI is a solid step up over its predecessors, offering noticeable improvements across the board. Thanks to the new integrated Intel Arc GPU, graphics performance has also improved significantly, offering performance close to that of entry level dedicated GPUs like the NVIDIA GeForce RTX 2050. The accompanying 14-inch WQXGA+ OLED display is fantastic, and excellent for both content creation and consumption. At Rs. 84,990 as of writing this review, we don't see any reason why one shouldn't consider the Acer Swift Go 14 AI if they're in the market for a thin and light laptop.
