

lywood, hip-hop, or pop music, which generally tend to carry a heavy bass line, then you will not be disappointed by the performance of these in-ear earphones. And, if for some reason, you can't get the 10mm drivers of these in-ear earphones to push out enough bass, then you also get Bass Boost+ via the realme Link app. Or if you are planning on tuning down the bass, then there are Balanced and Bright modes as well, which will help you. Again, not much to work with in terms of the sound signature, but three presets, at this point are great, and do the job well enough.

Coming to the microphone performance of these in-ear earphones. While the microphones tend to pick up noise in extreme conditions, such as a busy office space filled with geeks typing away on their mechanical keyboards, they hold their own in quieter environments. I tested these in-ear earphones sitting right to an AC and some background noise, and the microphones did a good job in cancelling out that noise.

Although, I did notice a bit of a reverb in the audio, which wasn't omnipresent across scenarios, but did seep in, bringing down the score that I gave these in-ear earphones.

BATTERY LIFE

The battery life on the realme Buds T110, while not being the best, helps you get through one full workday if you are listening to music. In my tests, with the volume set to 50 per cent and all the additional features turned off, the battery lasted 6 and a half hours, which is 30 minutes short of the claimed 7 hour battery of these earbuds. The case provides four more rounds of charging with some juice left. And, when in crunch, you can get these earbuds, as claimed by realme, to give you 120 minutes of playback time in just 10 minutes of charge.

VERDICT

realme Buds T110 make a strong case for themselves in their price bracket. These earbuds perform well at par with the

expectations, deliver above and beyond in terms of build and the robustness of the features, and bring in great value for your money to the table. While the score might suggest otherwise, these earbuds, these earbuds make for a solid option when you are looking for a pair TWS earbuds under Rs 1,500.

If you are looking for alternatives, then of the earbuds that we have tested, the Mivi DuoPods ENC F70, at Rs 1,599 and the POCO Pods are your best bets. Both these earbuds sound and score similarly to the realme buds, and honestly, the choice in this case would come down to your personal preference.
