

for if you are tending towards the high end of this budget range.

You also need to pay special attention to the **design and build quality** with mid-range TWS earphones. A metallic hinge, sturdy materials, and an overall sleek and good-fitting design are something that should be on your list. While the fit is a non-negotiable across all categories, you can play around and find the earbuds that pack all the features you need, along with great aesthetics in this price range. Another thing that you can look at is the inclusion of additional ear tips. The more, the merrier.

WHAT SHOULD YOU EXPECT IN TERMS OF SOUND SIGNATURE?

With mid-range TWS earphones, it is a roll of a dice when it comes to the sound signature. You can get a great-sounding pair of TWS earphones in the form of the Oppo Enco Air 3 Pro and Nothing Ear (2), while there are several others that you will find a slightly bass favouring sound signature. The general trend shows that you will get a balanced sound for the most part, but there will be a **slight**

lean towards bass for the most part. At Digit, we compare and score TWS in-ear earphones against a flat response that is generally considered ideal for purists and people who love every detail in their sound represented equally. But your preferences might vary.

PREMIUM TWS (ABOVE ₹10,000)

When it comes to Premium TWS in-ear earphones, the sky is actually the limit. There is no feature that you can think of that would not be present in a pair of premium TWS in-ear earphones. Many brands market their features under different names. However, the standard feature set remains the same. I believe that with the inclusion of technologies like personalised sound, ear mapping, and the like, there is a ceiling of innovation which we have hit for now. All the brands are busy perfecting the tuning of their earbuds and optimising the performance of their TWS as a whole.

The ANC that you get in this category will not disappoint you at all, for the most part. There are some earbuds that will let you down from time to time.

However, with a little research, you can find some great deals on TWS earphones in this price range. Additionally, if you are in this price bucket, then chances are that you will be one of the first people to try out new tech that is introduced in the world of TWS earphones.

Again, as with all the pricing segments that I included in this article, there will be a difference in terms of the features that you are getting. The higher you go, the more features you will get, and the chances of you getting cutting-edge features in your earbuds will be higher than usual. There is no set list of the features that you should look for. At this price, you should solely focus on the performance of the earbuds and the different features that are packed into them. If you were to go according to our internal testing standards, then the earbuds with the flattest sound signature will be the best performers.

The rest of the features would complement the great sound that you get from you get from earbuds in this price range. I would suggest taking the time to buy premium TWS in-ear earphones. Wait for price drops and get the most value for your money. **1**
