

## ViewSonic LS740HD PROJECTOR

**I used the ViewSonic LS740HD projector for a week and it amazed me!**

**T**he Indian projector market has been brimming with competitively priced products that are built well and give you performance that is worth the money that you pay for. Brands like ViewSonic have flocked to the Indian market with their offerings targeted at a wide audience base. There is something for the corporates, film enthusiasts, and gamers as well. One such multi-faceted product showed up at the Digit Test Centre in the form of the ViewSonic LS740HD/W.

This compact form factor projector exceeded my expectations, and for the price that it is retailing at, at the time of writing, makes for a great deal for anyone looking to make it a part of their home entertainment system. I used this projector at my home for playing games, watching movies, and even reading books off my wall, and it amazed me in every way possible. Read on to find out whether the ViewSonic LS740HD/W is a product worth shelling

out approximately ₹1.5L or not. Or should you look elsewhere?

### Build and design

The ViewSonic LS740HD/W is a compact projector. It has a footprint of 286x216mm, which ensures that you can fit it in your bookshelf when not in use. You get adjustable feet on this projector, and you can mount it on the wall as well. And, despite its solid build, it weighs in at just 3kg, which in conjunction with its small form factor, makes it fairly portable. I had no issues moving it around the house, and when it was not in use, storing it in my cabinet. The overall aesthetic of the projector makes it a good fit for a variety of settings.

In terms of the build quality of the ViewSonic LS740HD/W, there is nothing to complain about. You get a solid projector, which will hold its own over time. The feet are rigid and keep the projector in place, and their screw-enabled adjustment mechanism ensures that you are

not left thinking for a long time to get the perfect projection. It is certified for 24x7 operation, which makes it suitable for commercial applications too.

### Should you buy the ViewSonic LS740HD?

Well, I would say you can definitely keep it in the top 3 considerations when you are looking for a projector. This projector is mainly meant for the folk who would have a hybrid approach when deploying it. For example, using it on show floors during exhibitions and then bringing it back home for content consumption. And, for that, this projector is great, given its long operational capabilities, overall performance in bright environments and portability.

If you are someone looking for a projector to use at home, then go for cheaper options like the BenQ TH575 or ViewSonic M2e or the Samsung Freestyle.
