

An array of features that make you go "arey wah!"

The main selling point of the Kia Sonet has always been the sheer number of cutting-edge features it has on offer at a relatively affordable price point. This held true back when Kia first launched the Sonet back in 2020 and with the latest 2024 model, Kia has thrown everything and the kitchen sink at it.

Here is a brief rundown of all the features that we found were exceptional and really caught our eye. Be warned though, this is not an exhaustive list of all the features on the car but just the ones that we thought you needed to know about. Read more on [digit.in/features](https://www.digit.in/features).

This is why the Kia Sonet X-Line makes sense

We look at the Kia Sonet X-Line, the geeky way

DRIVING FEATURES

Driving modes

The Kia Sonet X-Line 2024, offers the driver the option to choose among three driving modes which include Eco, Normal and Sport. Eco tries to keep the RPM low for better fuel efficiency but overall feels quite laggy as the gearbox is lazy and hesitant to shift down. Normal Mode is a bit better in that regard but still feels a bit laggy and won't usually give you that boost of power needed for a quick overtake. There is a big jump up in Sport Mode. Throttle response gets much quicker and gear shifts are a bit faster as well. The Eco and Normal modes would be best for urban commutes, while highway driving would be best served in Sport mode.

Paddle shifters

Although the Kia Sonet X-Line 2024 is an automatic, like most automatic cars these days, it also has a manual mode where you can manually shift gears without the use of a clutch for situations where you might want to force the car into a particular gear. Unlike other cars in this price range though the Kia Sonet also has Paddle shifters behind the steering wheel to aid in the shifting of gears. This is the kind of thing you usually see in high-end sports cars or racing cars and obviously, it is nowhere close to as responsive as it would be on a sports car but you can definitely live out your F1 driver fantasy with this (just don't bring out the safety car or red flag please).

Traction Modes

The Kia Sonet X-Line 2024 offers 3 Traction Modes, namely, Snow, Mud and Sand. Selecting one of these modes tunes the traction control system for those specific scenarios by sensing the slippage of the left and right wheels and adjusting the power and braking to those wheels. This makes driving on loose surfaces like snow, mud and sand safer and easier in two-wheel drive cars. One important thing to keep in mind here would be that putting the Sonet into one of these Traction modes will not suddenly make it a world-beating off-roader or as capable as a purpose-built 4WD car. This is just to make life a bit easier in low-traction situations.
