

FEEDBACK

Feedback for the magazine and website, or just your opinions expressed

Dear Soham,

I am Ravi from Chennai, and reader of Digit magazine for many years... I came across the June edition and your message on Digit being part of Times Network and planning on a TV show. Congratulations for the same!

Like to share my views/thoughts for the show -

Title: Digital Space or Your Digital Voice

For the TV shows, it could be divided into 3 sections:

- 1) Latest updates in the world of tech
- 2) Core focus on a specific area of tech and an Indian angle
- 3) Ask us section or reviews of gadgets

For radio shows, more of podcasts with tech leaders speaking, event updates and audience connections.

Wishing all the best for the new steps.

—Ravi

Thank you for the kind words, Ravi.

Your suggestions are pretty close to what we had in mind, keeping the quintessential as part of the show. However, we'd also like to break the mould a bit. We're thinking of adding segments such as "Reality Check" or "Hype vs Reality" to break down tech hypes and separate the chalk from the cheese. Do let us know your thoughts on the same, now that you have my email id :)

—Soham

Hello Soham,

I share your concern about the potential impact of AI on our curiosity. Finding a balance between our curiosity and AI-driven exploration is a critical consideration. However, I don't believe that we will be able to see such

a balance. As your example of fast food aptly demonstrates, humans can struggle with moderation—obesity is spiking. AI would do exactly the same.

Upcoming generations may become less curious or curious about the wrong things. It may be less likely that we will see groundbreaking discoveries on the same level as Einstein's.

Thank you for sharing your insights on this important topic. I look forward to continuing this discussion.

Best regards,

—Yug Kukreja

Hi Yug!

Glad to know I am not the only one to express the concern. However, I assure you we are one of the very few looking at AI with that lens. AI will surely help speed up a lot of research and breakthroughs where time, data, data analysis and decision-making are bottlenecks. And, that's the balancing act of looking at the positive side of AI. As far as holding on to the natural, unpredictable, silly and outrageous creative human streak. The onus lies with us. It is you, me and other like-minded individuals who will have to continuously push to maintain and feed human curiosity. Humans have done it well so far, making machines work for the greater good of mankind. We're now entering a phase where it's even more critical that we have the bigger picture as the blue-print, as we advance into a predictable, measurable and calculative AI-driven world.

Let's keep this conversation going. Can you think of two areas where you think, we'd be less creative or experimental, as AI starts taking over?

—Soham

FAQs

All your questions about Digit answered here

Q What subscription options are available right now? And where can I buy the magazine from?

A To see the latest print subscriptions, head to:

<https://store.digit.in/subscribe>

To see the latest digital only subscriptions, head to:

<https://geek.digit.in/shop/>

Q I have bought a print copy magazine. Can I access the digital version too?

A Yes! ALL print copy sales, including individual copy

sales, subscriptions, and even mag-only subscriptions, all come with free digital access to that month's copy or a subscription that matches your print subscription. Subscribers need only write to help@digit.in and ask them to activate their digital subscription, and online buyers of the print mag can do the same. For newsstand buyers, just write in to help@digit.in with a picture of the magazine cover lying on your table and we're happy to provide access to the email address you wrote in from.

Q I want to read an older issue. Is there any way I can access the archive?

A Yes, we're giving access to our entire 23-year archive to all subscribers or special issue buyers. Note: If you're a subscriber, just ask help@digit.in for the link, and they will share it.
