

■ **FAULT IN THE DRAINS**

OpenAI CEO Sam Altman's massive \$27mn home in SFO has a faulty drainage system

Sam Altman

Four years after purchasing what was dubbed the most expensive home listing in San Francisco history, billionaire and OpenAI CEO Sam Altman has taken legal action against

the developers of his \$27 million mansion. Altman alleges that the developers and contractors engaged in a cost-cutting scheme "plagues by shoddy construction." The lawsuit, filed by 950 Lombard LLC in San Francisco County Superior Court, accuses the developers and contractors of conspiring to rush the property to market while misrepresenting its condition (via Forbes). <https://bit.ly/Faultman>

Satya Nadella finalised \$7.5 billion GitHub deal in just 20 minutes

Satya Nadella

Satya Nadella is known for his bold leadership and strategic vision, driving Microsoft to new heights since he took over as CEO in 2014. His talent for making decisive

and sometimes risky moves has transformed the company. One such move that highlights his leadership style is the quick and daring \$7.5 billion acquisition of GitHub, a deal he approved in just 20 minutes. A recent New York Times report discusses various deals made by Microsoft under CEO Satya Nadella, including the \$7.5 billion acquisition of the developer platform GitHub. <https://bit.ly/GittyRich>

■ **A BUTTERY WINDOW**

Bill Gates-backed startup is making butter from 'air'

Can you imagine butter being made without milk? Well, this startup in California has not only imagined it but is bringing it to life. Savor, which is a California-based startup, has reportedly developed a process for creating butter without the use of milk or any other dairy product. And this endeavour is being backed by Microsoft founder Bill Gates. But how does it produce butter then? This experiment is not a first for the company. It has been conducting experiments to create dairy-free alternatives for various products, including ice cream, cheese, and milk. The start-up uses a combination of carbon dioxide, hydrogen, and oxygen chains to produce its butter. As per a report by The Guardian, the result "tastes like the real thing". They use a thermochemical process that helps them to develop fat molecules using gases. <https://bit.ly/butterywindows>

■ **PEI-ING RESPECT**

Carl Pei takes a dig at Samsung Galaxy Ring design

Samsung's Unpacked event last night saw the tech giant unveiling an array of new products, including the much-awaited Galaxy Ring. Samsung's Galaxy Ring isn't just another smart device. However, Carl Pei, the outspoken CEO of Nothing didn't hold back in sharing his thoughts on Samsung's latest innovation.

Carl Pei

Carl Pei, whose company has garnered attention for its innovative approach to tech aesthetics, took a playful jab at the Galaxy Ring's design on X (formerly Twitter). "TM Roh – call me if you need design help. We can accelerate our vision of making tech fun again!" Pei wrote in his X post. Pei's comment sparked a lively discussion among tech enthusiasts and consumers alike, with many sharing their own thoughts on the post. <https://bit.ly/PeingRespsvt>
