

runs on the latest OxygenOS 14, based on Android 14. This UI looks really pretty but... sadly, it has bloatware. It comes with 12-13 pre-loaded apps that you can remove, and that's the only thing stopping me from loving it.

CAMERAS

The OnePlus Nord CE4 Lite 5G features a dual-camera setup, with a 50-megapixel Sony LYT-600 primary sensor and a 2-megapixel depth sensor. For selfies and video calls, it has a 16-megapixel sensor. I have mixed feelings about the camera. At first, I thought the low-light photography was bad, but

then it clicked some really good low-light pictures. The daylight pictures are decent too. It captures good details but adds a warmish hue, which I personally don't like.

In low light, if there's a bit of light in the frame, it clicks okayish pictures. In complete darkness, the dynamic range gets messed up, and the pictures lack detail. Typical budget phone stuff. The edge detection is bad, so portrait shots aren't great, but the details are good after processing. Sadly, there's no ultrawide sensor, so you're stuck with 1x to 10x digital zoom. If you take a lot of selfies, this isn't the phone for you.

Details are good, but the color accuracy is way off, with a noticeable warm hue.

BATTERY

The OnePlus Nord CE4 Lite has a 5500mAh battery with 80-watt fast charging. We tested it by playing Call of Duty, watching high-quality videos, and general use. It used 5% battery in 1 hour of GPS and 15 minutes of COD, and 3% in 30 minutes of high-quality video. I also charged it from 0 to 100% and it took 72 minutes for that. In my opinion, the Nord CE4 Lite 5G has good battery life, and the 80-watt fast charging is a nice bonus (as we expect from OnePlus).

VERDICT

So that's what the OnePlus Nord CE4 Lite 5G was all about. To sum it up, you get a bright display on it, it has a good enough battery and performance, but the design isn't the best. If you're someone who watches a lot of content, then this phone can be your weapon of choice thanks to its bright and detailed display and long-lasting battery. As for gaming, it isn't bad either but could have been better. Lastly, the camera works okay in daylight, but honestly, I will not choose it for its cameras.
