

As we celebrate India's 78th Independence Day this 15th of August, and having covered technology in the country for over two decades now, we decided it was time to look inwards and unlock the Pandora's box of Indian tech innovation as it dawns into a new era.

This is not the first time that we are doing it though. Over the years Digit has been at the forefront of Indian tech coverage, and it makes us proud to bring you some of the best and groundbreaking innovations as they sprout in our own backyard.

In this month's cover story, we had a look at a whole lot of different perspectives and angles of Indian technology industry. From manufacturing to failures, we uncovered it all.

The first cover story this month takes a deep dive into the mission of the world's largest encyclopedia, to empower Indians with information. To get in-depth information on the topic, we spoke to Praveen Das, Lead Partnerships Manager, South Asia at the Wikimedia Foundation, the nonprofit organisation behind Wikipedia and other Wikimedia projects who shared their insights about their plans in India.

Next, our journey took us knocking on the doors of Mr Sreekrishnan Venkateswaran, CTO of Kyndryl India. Mr Venkateswaran was keen on sharing his outlook towards India's tech journey in the coming years, and how his company, Kyndryl will contribute to it.

Having been on a high road, we took a step back to look at the ripple effects of the shutdown of Koo, the much celebrated Indian alternative to the popular micro-blogging platform, X (formerly known as Twitter). This development has shown a rather harsh reality to the Indian tech fraternity and its bid to innovate. Well, all's well that ends well, and as we set the Koo bird free, we have some memories (learnings) left to reminisce.

The gloomy skies brightened again, as we took a look at the Indian tech manufacturing landscape. We took a dive into India's tech manufacturing scene over the years, traced its evolution, got expert opinions on the potential of India to become the tech factory of the world, while looking ahead at the road ahead, which is filled with promise.

Join in, and celebrate Indian tech, and unbox its gifts with your technology navigator. **d**
