

# Hands-on with AMD Ryzen AI 300 series laptops

We got our hands on a bunch of AMD Ryzen AI 300-powered systems at the AMD Tech Day in LA last week, and it was surely an impressive line-up of laptops across the board. We saw AMD Ryzen AI 300 series powered laptops from Asus, HP, Acer, and MSI. All of them were running on the AMD Ryzen AI 9 HX370 processor, which will be the top-of-the-line chip in the Ryzen AI 300 series processor line-up. From thin and light laptops for everyday use to high-

performance productivity machines and some very capable thin and light gaming laptops as well. Before we get to our list of the best of what we saw at the AMD Tech Day, let's have a quick recap on what the AMD Ryzen AI 300 series APUs have to offer. We've picked three laptops running on the AMD Ryzen AI 300 series processors that caught our fancy at the AMD Tech Day 2024 demo zone. Let's have a closer look at them. Full article on - <https://bit.ly/H-AMDSOn>

## Asus ZenBook S16

The ASUS ZenBook S16 was projected as a thin and light gaming laptop that can deliver satisfactory native 1080p gaming at medium settings on many AAA titles. The ASUS ZenBook S16 was able to run Fallout 4 at 1200p and we noticed very smooth gameplay, AMD didn't comment on the FPS bit, the reason given was that the systems were not running on final version of the BIOS (the real-time FPS overlay was set to off). But, with the limited amount of time we spent on the device, we could tell that the game was running above 50 FPS for sure.

What's interesting though is the form factor, the laptop is probably one of the slimmest 16-inch laptops out there with just 1.1 cm in thickness and weighing a meager 1.5 kilograms. As we mentioned earlier, the ASUS ZenBook S16 shown at the demo zone was running on the AMD Ryzen AI 9 HX370 processor.

## HP OmniBook Ultra 14

The OmniBook Ultra 14 is a thin and light laptop that's marketed as an AI powerhouse with great battery life to boot. HP is claiming up to 21 hours of battery life, which is a clear indicator of what we can expect from AMD Ryzen AI 300 powered laptops, the benchmark for good battery life has moved beyond the standard 12-hour claim. The claimed battery life label has moved into the twenties. While the real-world number on mixed usage will most certainly be lower. It would be fair to expect next-gen AI PCs to offer 12-15 hours of battery life, which perfectly syncs with the overarching "all-day battery life" claims. We're not complaining. Especially if that battery life is supported by excellent performance across the board. And that is what AMD promises with the AMD Ryzen AI 300 series of processors.

## ASUS TUF A14

This has to be our pick of the lot, the ASUS TUF A14 is a 1.46-kilo-gram 14-inch gaming laptop that houses an NVIDIA GeForce RTX 4060 under the hood. The combination of the AMD Ryzen AI 9 HX 370 processor and the RTX 4060 would make for a very sweet 1440p gaming machine. The TUF A14 has a very slim and elegant profile, it doesn't scream gaming. And, that's a good thing.

The 14-inch 2.5K display on the ASUS TUF A14 is true gaming cred, with 165Hz refresh rated and a claimed pixel response time of 3ms. We can't wait to get our hands on this one. If priced right in India, this will be the perfect gaming laptop for working professionals. It has all the makings of an excellent workhorse that packs the right gaming chops to deliver some serious firepower when it comes to gaming.
