7500mAh battery for phones?

Xiaomi might be working on a new technology that will equip its future smartphones with batteries even bigger than 6000mAh. Xiaomi has always been one of those brands that roll out very unexpected technologies in smartphones. If media reports are to be believed, the

Chinese smartphone brand is trying to build its smartphones with a 7000mAh battery with 120-watt fast charging and a 7500mAh battery with 100-watt fast charging.

As per leakster Digital Chat Station, who took to Weibo to share this, Xiaomi is considering several fast charging solutions for various battery capacities. The company is reportedly developing a 5000mAh battery with 120-watt fast charging support and a 5500mAh battery with 100-watt charging capability, which can fully charge in just 18 minutes. And it is not stopping here.

Sennheiser HD620S launched in India

After a long wait, Indian audiophiles were treated to the launch of the Sennheiser HD620S headphones, as the brand announced their launch in India. These audiophile-grade, closed-back headphones have been available in the global market for a couple of months now. The Sennheiser HD620S headphones are a pair of closed-back headphones, packing a "custom-tuned 42mm dynamic transducer". They have a plastic build, with a metal in-lay in the headband. The cable of these headphones is detachable.

■ PRODUCT LAUNCHES

Apple is working on a tiny Mac mini, M4 MacBook Pro and a tabletop iPad

Apple is bringing its iPhone 16 series next month.

But apart from that, it works on a lot of other devices too.

Rumour has it that we will soon get a lot of other pretty creative devices too from Apple a lot sooner than expected. I am talking about a Mac mini, M4

MacBook Pro, and a tabletop iPad. Apple is reportedly working on a new Mac mini that's even more compact. It can possibly resemble the size of an Apple TV. It can feature Apple's upcoming M4 and M4 Pro chipsets. The design will likely include multiple USB-C ports, HDMI, and a power port, with possible fanless cooling for silent operation. This device will be really ideal for various uses, from home media servers to portable workstations. It is expected to drop this year itself. Apple is expected to announce its M4-powered Macs soon. <https://bit.ly/4cEShQb>

Made-in-India Pixel 8 starts rolling out

When Google hosted its 'Google for India' event last October, the company made a significant announcement to support the Make-in-India initiative. Google unveiled its plans to begin manufacturing Pixel smartphones within India, aligning with the nation's push for domestic production. Now, nearly 10 months later, Google has fulfilled that promise, with the first batch of Made in India Pixel 8 devices officially rolling off the production lines.

"Excited to announce that the first of our Made in India Google #Pixel8 devices have started rolling off the production lines," the tech giant announced on X (formerly Twitter). <https://bit.ly/3AMrrZ3>
