

able, offering a clean and user-friendly experience. Notably, the device comes with a promise of 3+4 years of OS and security updates, respectively, ensuring relatively long-term software support.

AI features on the Edge 50 are relatively limited, with the primary function being the generation of wallpapers via prompts. While this feature is neat, it doesn't add significant value to the overall experience. In our Digit AI-Q test, the Motorola Edge 50 scored 26/100. Although this is respectable for its price range, it falls short compared to the OnePlus Nord 4, which scored 33/100.

CAMERAS

The Moto Edge 50 stands out as one of the rare smartphones priced under ₹30,000 to feature a telephoto camera. This inclusion allows the device to capture impressive portraits with a more flattering focal length for portraits without sacrificing on quality. The phone houses a 50 MP primary camera, a 10 MP telephoto shooter with 3x optical zoom, and a 13 MP ultrawide camera.

Portraits on this phone are stellar with exceptional skin tone accuracy, detailed textures, and a well-balanced dynamic range. However, the edge detection in portrait mode occasionally appears somewhat artificial,

which can detract from the overall realism of the image.

The main camera excels in daylight conditions, producing vibrant and natural-looking photos with excellent dynamic range. It effectively captures the essence of scenes with rich colours and well-preserved details.

The 10 MP telephoto lens also performs admirably, offering clear and detailed images. On the other hand, the ultrawide camera falls short, particularly at the edges where it struggles to maintain detail and sharpness. The ultrawide shooter also doubles as a macro camera which clicks decent shots.

Colour consistency across the different lenses is an area that could be improved, as there is a noticeable variation in colour reproduction between the main, telephoto, and ultrawide cameras.

The 32 MP selfie camera, while capable of delivering sharp images with good colour accuracy, could benefit from better portrait edge detection to enhance the quality of selfie portraits. For video enthusiasts, the Moto Edge 50 supports 4K recording at 30 fps across all lenses. While the video quality is generally good, the dynamic range, especially in the main camera's footage, could be better. Highlights in videos are prone to overexposure, which impacts the overall video quality.

BATTERY LIFE

When it comes to battery life, the Motorola Edge 50 delivers a decent performance. Casual users will find that the phone comfortably lasts a full day on a single charge. However, heavy users who frequently game or take photos might need to recharge midway through the day.

The device comes with a 68W charger that can quickly top up the battery from 0-100 per cent in just 56 minutes. Additionally, it supports 15W wireless charging, a feature that is relatively rare at this price point.

VERDICT

The Motorola Edge 50 makes a strong case for itself in the sub-₹30K smartphone market. Its premium design, durable build, and impressive HDR10+ display make it a strong contender in its price range. While the Snapdragon 7 Gen 1 Accelerated Edition may not satisfy hardcore gamers, it handles daily tasks with ease and offers a smooth user experience. Hello UI is a notable highlight, providing a clean and very customisable interface without any unnecessary bloatware.

The phone's telephoto camera adds significant value, delivering high-quality portraits with accurate skin tones and dynamic range. However, the ultrawide lens and colour consistency across lenses could be improved. Overall, the Moto Edge 50 is indeed a bang-for-your-buck phone for most users, but gamers may want to consider alternatives such as the OnePlus Nord 4, or perhaps, the more powerful POCO F6.
