

Lenovo Yoga 7 2-in-1

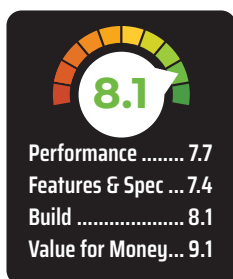

The Jack of All Trades Convertible

₹1,01,990

Positioned comfortably between the lower-end IdeaPad Flex 14 series and the premium Yoga 9 14 series, the Lenovo Yoga 7 2-in-1 14 (2024) is a midrange convertible that promises a blend of performance and affordability. This latest iteration brings some notable external tweaks alongside the anticipated upgrade to Intel's Meteor Lake processors. Our review unit came with the Intel Core Ultra 5 125H and a 1200p OLED display, priced at ₹1,01,990. The range starts at ₹88,089 with the lower-end variant featuring the Core Ultra 5 125U and a 1200p IPS display. At the top end, you have the Intel Core Ultra 7 155H and a 2.8K (2880×1800) OLED display which is priced at around 1.2 lakhs.

The Yoga series is known for its curved-edge design, something that has carried forward in the 2024 model. While visually similar to its prede-

cessor from the front, the latest Yoga 7 2-in-1 features redesigned ventilation grilles, rubber feet, and speaker grilles at the rear and bottom panel. The build quality remains top-notch, exhibiting excellent rigidity with minimal flex. However, the hinges aren't as rigid and durable and tend to wobble at wider angles.

The Yoga 7 2-in-1 14 is also heavier than the premium Yoga 9 2-in-1 14, making it a bit cumbersome for travel. Nevertheless, it's still in the same ballpark as other 14-inch convertibles in the market as far as weight is concerned.

Coming to the keyboard and touchpad, the keyboard on the Lenovo Yoga 7 offers a decent experience overall. The keys are on the shallower end, with soft feedback. We would have liked more tactility but what is available is adequate. The touchpad dimensions remain the same as last year at 12 x 7.5 cm. The touchpad performs

well, and clicks have loud and responsive feedback.

CONNECTIVITY

Lenovo has retained all the ports from the previous model, though in a new arrangement. The inclusion of dual Thunderbolt 4 ports is great, but their placement on the same side limits flexibility for charging and connecting external displays. You also have only a single USB-A port; more would have been nice. Other than that you also get an HDMI 2.1 port, a 3.5mm audio combo jack and a microSD card reader.

DISPLAY

The Yoga 7 2-in-1 offers three touch-screen options: A 1920 x 1200 IPS panel at 60 Hz refresh rate, a 1920 x 1200 OLED panel with 60 Hz refresh rate and DisplayHDR which is featured in this review unit, and finally the 2880 x 180, OLED panel at 120 Hz refresh rate and DisplayHDR. The price difference between the panel variants is pretty significant, with the base variant costing around INR 85K, and the switch to OLED immediately bumping the price up to around INR 1 lakh. That said, the difference in visual quality is also pretty significant. We tested 100 percent sRGB and 99.3 percent DCI-P3 colour gamut coverage on the 1200p OLED panel, which is excellent. Coming to brightness, we tested a peak average brightness of 395 nits. While this will suffice for indoor usage, the display will struggle in bright outdoor environments. This isn't an unlikely scenario for a 2-in-1 that might also be used as a tablet. Something to keep in mind.

PERFORMANCE

The Core Ultra 5 125H processor in our review unit offers good performance, easily outpacing the previous generation's Core i7-1355U.

We start things off with synthetic GPU performance for which we use the 3DMark benchmark. This model comes with integrated Intel Arc Graphics. The Ultra 5 125U variant on the other hand comes with Intel Iris Xe. The difference
