

between Iris Xe and Arc is pretty huge. We've already tested Intel Arc performance on a Core Ultra 7 155H, and we saw synthetic benchmark scores that were comparable to a discrete RTX 2050. The Ultra 5 125H isn't too far behind either, easily performing as well as if not better than its 2-in-1 peers in the same price segment.

You can easily manage some light gaming on the laptop, but modern games will definitely struggle. Coming to productivity, processor and general system performance, once again the Lenovo Yoga 7 2-in-1 offered great scores across the board. Here, we used PCMark 10 to test general productivity for everyday tasks, and Cinebench R23 and Geekbench 6 to test single thread and multi-thread performance.

From our testing and time spent with the laptop, the Lenovo Yoga 7 2-in-1 can comfortably perform most everyday productivity and work-related tasks with ease. Media consumption, office applications, and even light editing and creative workloads are a breeze. Additionally, with an NPU onboard, you also have acceleration for AI-related tasks.

We used AIDA64 to test memory speeds and CrystalDiskMark to test storage speeds. In both cases they weren't the fastest speeds we've seen in a 2-in-1 even in this price segment, but they're nowhere near the worst either.

BATTERY LIFE

Coming to the battery life, the Yoga 7 lasted 15 hours and 20 minutes in our video loop test, which is impressive. Despite having the same battery capacity as its predecessor, the new Lenovo Yoga 7 2-in-1 has significantly improved battery life.

THERMALS

The Yoga 7 runs cool even while running fairly intensive tasks. The peak average surface temperature was just 29.7 degrees Celsius during our stress test. With the centre of the laptop, near the IJKL cluster hitting around 30.5 degrees Celsius.

VERDICT

The Lenovo Yoga 7 2-in-1 14 combines a convertible form factor with a sturdy build, long battery life, and a capable modern CPU. It is a solid choice for anyone looking for powerful a 2-in-1 laptop for everyday use.

We will add that for ₹85,000, the base variant offers good value for money for what is on offer. While you don't get the OLED display, the Core Ultra 5 125U in the base variant isn't that much slower than the Ultra 5 125H in terms of performance. However, the OLED display on the Ultra 5 125H model we tested offers much crisper visuals and vibrant colours. If your use case demands the colour accurate OLED display – such as for photo or video editing, then the premium does shoot up.

That said, at ₹1,01,990 the Lenovo Yoga 7 is still competitively priced when compared to other similarly specced OLED 2-in-1s in the market right now and even manages to outperform pricier competitors.
