

Coocaa 65-inch Y73 Pro QLED TV

Punching Above Its Weight

₹45,990

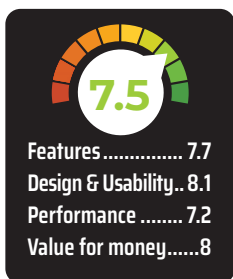

Coocaa is a familiar brand in South Asian

countries like Indonesia, Malaysia, and the Philippines. The company is now trying to make inroads in India and is selling TVs online on Flipkart. The launch of new TVs from such brands in the market often signals a prime opportunity for buyers, as new entrants typically aim to make a strong first impression by offering feature-rich products at competitive prices. We have been testing the Coocaa Frameless 65Y73 Pro QLED TV, which features a QLED+ panel, runs the Google TV interface, and supports popular HDR formats like Dolby Vision, HDR10+, and HDR10. In this review, we will discuss whether the Coocaa 65Y73 Pro QLED TV is the great bargain it promises to be.

DESIGN AND REMOTE

The TV is manufactured by the parent company Skyworth at their Hyderabad manufacturing facility. This 65-inch

QLED TV features a solid metallic frame and narrow bezels on three sides. The slim plastic strip at the bottom, with Coocaa branding, has a chrome finish that enhances the design without being distracting. Below the panel, there's a physical power button with a stylish power LED and a dedicated shutter to disable the far-field microphone for added privacy.

The metallic feet are reasonably stable and provide a secure base for the TV. The ports are all side-facing and easy to access. Overall, the TV has a functional design and there are no concerns here.

The remote control connects to the TV via IR or Bluetooth. While the build quality feels a bit flimsy, the remote is quite comfortable to hold and operate. One peeve point is that you can't increase the volume by just pressing and holding the volume up button. For a 10-point volume increase, you will have to press the volume up 10 times. The remote features dedicated buttons for summoning

Google Assistant, changing user profiles, and switching inputs. The white colour of the D-pad and Home button makes them easier to use in low light. A standout feature is the customisable 'Daily Key,' a fourth hotkey that can be mapped to any app of your choice and can also be used to set two button combinations targeting different apps and functions.

DISPLAY

Coocaa is using a "QLED+" panel. Let's briefly explain how this is different from regular QLED panels. QLED+ essentially refers to the use of an xQDEF diffuser plate.

QLED TVs use a Quantum Dots layer to enhance the quality of the back-light. This layer or sheet is usually the Quantum Dot Enhancement Film or QDEF. New QLED TVs now replace the QDEF sheet with xQDEF diffuser plate that is basically a combination of QDEF and Diffuser plate. This combination of components results helps enhance viewing angles, brightness and colours. This also results in a better lifespan and reduced cost for manufacturers. We are assuming many other OEMs are also using xQDEF without explicitly marketing it.

Another interesting highlight of the TV is the matte finish on the display. This feature reduces reflectivity, which I found to be a major advantage, especially if you plan on watching your TV in a well-lit room with light sources or open windows. The matte finish helps minimise glare and improve contrast, thus making it easier to enjoy your TV. However, at times the picture can look less sharp, especially if you are too close to the TV. Glossy displays, on the other hand, can give a greater sense of depth.

We tested the TV in Filmmaker Mode which is the most accurate colour-accurate profile on the TV. Filmmaker Mode works for Dolby Vision and HDR10+/10 as well. We recorded a maximum peak brightness of 387 nits in the vivid mode but in filmmaker mode, the brightness expectedly drops down to approximately 300 nits.
