

The colour volume as well as colour gamut was consistent with QLED TVs in the affordable and mid-range price segment. The display can reproduce about 85% of DCI-P3 colour space and around 66% of BT2020 colour space in UV terms.

Our unit seems to have an IPS or equivalent panel with wide viewing angles, and we did not notice any loss of luminance or colour when viewing off-axis. It's not uncommon for companies to source both IPS and VA panels for retail units.

HDR AND SDR PICTURE QUALITY

Regarding picture quality, the Coocaa Y73 Pro performed well in our display test. We use Spectral C6 HDR2000 colourimeter, VideoForge Pro pattern generator, and Calman Ultimate software to test colours.

In the SDR colour checker test, the Coocaa Y73 Pro scored an average delta error of just 1.4 and a maximum delta error of 4.3 out of the box. This is excellent colour accuracy in SDR.

The TV tracks BT.1886 gamma curve faithfully for the most part with a slight undertaking in the low brightness regions. This implies that shadow details will be crushed, but the same was not very apparent in the SDR content we streamed online.

Colours are mostly accurate in HDR10 and HDR10+ but the HDR experience lacks punch and Impact due to limited peak brightness and dynamic range. This is again true for most affordable HDR TVs that we test.

As for colours, we recorded an average delta error of 2.1 and a maximum delta error of 8.4 which is excellent. As you can see in the graph above, the Luminance response tracks the standard PQ EOTF reasonably well.

In Dolby Vision content, we noticed that the TV struggled with impactful highlights. Dark scenes in Dolby Vision were mostly tone mapped nicely but they felt a little too dark at times. Overall, the HDR experience is not impressive but still exceeds our expectations at this price point. We didn't notice any

major issues with the upscaling of legacy content and with motion handling in the Filmmaker Mode.

PERFORMANCE AND SOFTWARE

Coocaa TV is powered by a 1.5 GHz quad-core processor backed by 2GB RAM and 16GB storage (11GB for users). We still had approximately 9.5GB free after installing basic streaming apps.

This is a standard configuration for TVs in this budget (save for tier-1 brands like Sony, Samsung and LG that stick to 8GB storage for affordable and midrange TVs). UI transitions are a tad sluggish. We encountered some random stutters while fast-forwarding content or when switching between apps.

The Google TV software is based on Android 11 TV with several added customisations on top. You can access quick settings and shortcuts from the input key. Google TV ensures perks like smart connectivity via Google Assistant and seamless mirroring from the Google Home app. Thanks to the far-field microphones, you can use 'OK Google' prompts hands-free and this worked very reliably from a normal viewing distance of 7 to 8 feet.

Google TV interface gels very well with Google services and apps on smartphones. You can use the virtual remote in the Google TV app, set your watchlist directly from the browser on your PC, or even download apps directly to your TV from your phone.

You can cast videos from your Android phone or Apple iPhone from popular apps like Netflix, YouTube and more. Apple AirPlay and HomeKit support is not present, so screen mirroring from Apple devices will not be as seamless.

Coocaa adds several preloaded apps on the TV like Swait Home, Daily Manage, and Daily Play that we didn't find to be very useful. There is also a Tivi Karaoke app that has a collection of popular songs in Karaoke format.

GAMING AND AUDIO

This is not particularly a gaming TV, since popular gamer-centric features like

motion accelerator, high refresh rate, and ALLM are missing. Our casual gaming experience on the TV was fine. Unless you are a competitive gamer, you will find the 60Hz display responsive enough for casual console gaming. HDR in games is not as impactful.

The 40W audio from the TV can get very loud. The quality of the audio, dialogue clarity and width of the sound stage are still average. If you are particular about audio from your TV, you will need to invest in an external sound system.

VERDICT

If you are looking for an extra-large 65-inch display at an affordable price, the Coocaa Y73 Pro is certainly worth considering. It offers great colour accuracy, especially in SDR, and a matte finish on the display that effectively mutes reflections. The display has wide viewing angles, and the audio is loud and reasonably clear. On the downside, the HDR experience isn't as impactful, and we encountered a few random bugs in the software. With any unfamiliar brand, it's hard to have complete assurance of long-term after-sales support, however, Skyworth, the parent company of Coocaa, has extensive experience in manufacturing TVs and operates over 300 service centres in India.

All said and done, the Coocaa Y73 Pro TV punches above its weight and its flaws seem easily forgivable for the price.

—Deepak Singh

SPECIFICATIONS

Display Size: 65-inch, matte display, 10 bit (8bit + FRC) | Display Type: QLED | Display Resolution: 3840 x 2160 - 4K UHD | Panel Refresh Rate: 60Hz | Supported HDR Formats: Dolby Vision, HDR10+, HDR10, HLG | Speakers: 40W | Audio formats: Supports Dolby Atmos | Software: Google TV | HDMI Ports: 3x HDMI | Processor: 1.5GHz Quad-Core processor, Mali G52 GPU | RAM and Storage: 2GB RAM and 16GB storage | Other connectivity options: two USB ports, Dual-band Wi-Fi, Optical input, Bluetooth Ethernet, Antenna input, AV in, Headphone out
