

GROK-2 UNLEASHED: UNLIKE ANY OTHER AI CHATBOT

Grok-2 is the latest iteration of X's powerful AI chatbot. Building upon the success of its predecessor, Grok-2 offers enhanced capabilities, improved accuracy, and a more natural conversational style. Due to its deep integration with X, it has several advantages over ChatGPT, Gemini or Copilot:

- **Real-time X Data:** Grok-2 leverages X's vast real-time data for more accurate and up-to-date responses.
- **Unfiltered Image Generation:** Unlike ChatGPT, Grok-2 can generate unfiltered images, including potentially sensitive or controversial content.
- **Dual Modes:** Grok-2 offers both a regular and a "fun" mode, providing a more personalised and entertaining experience.

- **Tweet Referencing:** One of Grok-2's unique superpowers is it can directly reference tweets it uses for information, enhancing transparency and accuracy.
- **X Integration:** Grok-2 is seamlessly integrated into X, offering convenient access and features like "Ask Grok."
- **X User Roasting:** If the previous features weren't enough, Grok-2 can also provide humorous commentary on X profiles, showcasing its capabilities and offering users a unique feature.

By creating AI assistants like Grok-2 that are accessible and user-friendly, Musk ultimately hopes to democratise access to AI and foster a deeper understanding of its capabilities and limitations.

passing second. Musk is running the show, and the effects of his autocracy are reflected. Open your X timeline, and you will see a change right there.

ALGORITHM TRANSPARENCY

After delisting the company from the New York Stock Exchange, Musk's focus shifted to making things more transparent, since after the move, the control was in his hands. To work around that, Musk had promised that he would make Twitter's recommendation algorithm open-source. He kept his promise, and it was announced a day before the April Fool's Day of 2023, on March 31, 2023, that a large chunk of Twitter's recommendation algorithm was now open source with more releases to follow.

As soon as the complex set of codes governing the recommendation system on arguably one of the most influential social media platforms in the world, hit the interwebs, people shredded it to pieces, pub-

lishing their findings on the platform which they were tearing down.

However, Musk seemed to have his guard up already and had been preparing the general populace about the imminent flaws that would be discovered once the code was revealed. "Our "algorithm" is overly complex & not fully understood internally. People will discover many silly things, but we'll patch issues as soon as they're found!"

Musk posted on X, following up on his announcement of the change.

Personally, the changes I have observed on my feed are that the recommendations are much more randomised than they were before, pushing the boundaries of my content exploration on the platform beyond my realms of interest. One person's experience is not the required data set to draw any conclusions on the efficacy of
