

and resale, further enhancing trust in the market.

Every phone comes with a comprehensive device report, a 6 or 12 month warranty, and a 15-day return policy. These help us foster consumer confidence. Moreover, with nearly 200 stores pan India, customers know that they can reach online as well as offline.

Q What are the primary challenges faced by the refurbished gadgets industry in India, and how is Cashify addressing them?

A The biggest challenge is the uncertainty that people harbour about refurbished phones. The uncertainty is majorly due to insufficient awareness about the category. In one of our surveys, 2 in 5 respondents who claimed to know about refurbished phones didn't understand the term correctly. While this knowledge gap is gradually closing, there is still much work to be done.

Q How do you see the role of technology (specifically AI) in transforming the refurbished gadgets market?

A AI will be a game-changer in the market. Insights from our device diagnostics SaaS tells that most people are unable to share the accurate condition of their old phones - a requirement that's paramount in deciding a phone's buyback price. We're building a device that auto-accesses a device's condition, helping suggest the most-accurate and best offer price for their old phones. This will help us analyse a device's condition most accurately, further helping provide better prices to our customers.

Q What are the biggest opportunities for growth in the refurbished gadgets market?

A In itself, the refurbished segment is an opportunity to make technology available and affordable for all. We're leveraging this by delivering value to the customer. We refurbish and add value to older devices, providing customers with

phones that perform like new at a fraction of the cost. As 5G rolls out and new models launch rapidly, upgrade cycles are shortening. But it doesn't mean that everyone will be able to afford a new phone. That's where refurbished comes in. This is creating room and demand for older models, allowing us to reintroduce them in the market as refurbished.

Q How do you perceive the consumer mindset towards refurbished gadgets in India?

A Consumer mindset towards refurbished gadgets in India is evolving positively. Initially, there was significant scepticism regarding the quality and reliability of refurbished devices. There still is, but has narrowed down quite a lot. However, with increased awareness and education about the benefits of refurbished gadgets, consumers are becoming more open to these options. The aspiration to own a premium smartphone at up to 40% less is definitely a major push.

Q How is Cashify working to change consumer perception about refurbished gadgets?

A People's main concerns about pre-owned devices are device quality and the unavailability of a warranty or refund policy. We ensure transparent communication about what is refurbished and provide comprehensive device reports detailing the

condition and any repairs made. This transparency helps alleviate fears and reinforces the reliability of our products. To further build trust, we offer a hassle-free warranty-claim process available pan-India, which can be accessed online or at any Cashify store. These initiatives ensure consumers receive true value for their money and help shift the perception of refurbished gadgets.

Q What role does customer service and after-sales support play in building trust in the refurbished

gadgets market? How is Cashify addressing this?

A Customer service and after-sales support are crucial for building trust, especially in the refurbished gadgets market. Our consumer surveys show that many prefer the unorganised market for its direct, in-person support. To address this, Cashify's nearly 200-store network provides convenient, face-to-face assistance. We also offer comprehensive 6 to 12-month warranties and a 15-day return policy to boost confidence in product quality. Transparency in our claim process and responsive customer support further enhance trust, ensuring customers feel supported throughout their purchase journey. These efforts collectively reassure buyers of reliable products and dependable service.

Q What is Cashify's vision for the future of the refurbished gadgets market in India? How do you see the industry evolving in the next 5 years?

A We're looking at a vibrantly growing market ahead. Predictions are that the market will double to \$10 billion by 2030. The entry of newer players in the organised market is helping the category boom. But there's still a lot of untapped potential. As more and more players enter the organised market, consumer base and trust grows and the market, which is predicted to boom by 2030, might boom sooner. **d**
