

Download apps or set up your watchlist from any device

Of course, Google TV leverages the vast Google ecosystem advantage. If you use an Android phone, you can directly download apps to your TV from the Play Store on your phone. Just look up the app in the Google Play Store. Now press the drop-down button next to the Install button.

Select your TV from the drop-down menu and the app will directly install on your TV. Similarly, you can also directly download apps to your TV by opening Play Store in a browser on your laptop or any other device.

The Google TV app on Android or iOS devices can help you customise your TV experience. You can directly set your watchlist from the app or even from the widget in Google Search that shows up whenever you look for content. You can also pull a virtual remote from the Google TV app whenever you need to.

Rearrange Apps on Google TV

To move apps you use more frequently to the front, just go to the "Your Apps" row and navigate to the app that you wish to move. Now long press the app and you will get the option to "move" the app. You can now use the left and right buttons to move the app to your preferred spot.

Set up Profiles for family members

If different family members in your home use the same Google TV, it is highly recommended that you set up

separate profiles for everyone. This way, everyone can have their own watchlist and receive better content recommendations based on their tastes and preferences. You can also add parental controls to specific profiles or password-protect them.

Try a different launcher

If you feel the Google TV interface is too boring, you can try a different launcher to refresh your experience. Launchers like Projectivy Launcher offer more personalisation options to fine-tune the interface. The launcher comes with several useful test patterns to help you calibrate your TV. This paid version also unlocks the ability to add more display profiles.

Take screenshots and screen recordings on Google TV

To take Screenshots on your Google TV, you can use Button Mapper. The app lets you map a dedicated hardware button as a screenshot button.

But if you are familiar with ADB, you can easily take screenshots and pull them to your PC using the following commands.

- Take a screenshot: `adb shell screencap /sdcard/screenshot1.png`
- Pull the screenshot in your ADB folder: `adb pull /sdcard/screenshot1.png`

To record your TV screen you can use the following command:

- To start screen recording: `adb shell screenrecord /sdcard/recording.mp4`

■ To stop screen recording: `press Ctrl + C`

- To pull screen recording: `adb pull /sdcard/recording.mp4`

Ambient mode shortcut

Ambient Mode is a screensaver feature on Google TV that adds aesthetic appeal to your living room. When your TV isn't in use, Ambient Mode activates, displaying either an art gallery or your photos, depending on your setup choice.

To trigger Ambient Mode, just press the home button and then the back button. This shortcut is convenient compared to navigating through the settings menu.

Reduce background transmission — privacy submenu, Send files to TV, Web video caster.

Power on behaviour

If you have an external media device connected to your Google TV via HDMI port, you can change the power-on behaviour to automatically switch to the last used input when you turn on your TV. This will save you the trouble of manually switching inputs every time you turn on your TV.

This feature is quite helpful if you have plugged in an external streaming stick or even if you keep your gaming console connected to your TV.

Send Files to your Google TV

The Send Files to TV app is incredibly useful for transferring files between your phone and TV without the need for cables. For instance, you might use it to push an APK file to sideload an app on your Google TV or to quickly project a presentation during a work meeting. It's also handy for sending movies or TV shows to your smart TV for a better viewing experience.
