Lenovo's new Auto Twist AI PC can follow you around

Lenovo made a splash at Lenovo Innovation World 2024 with the unveiling of several products aimed at revolutionising professional computing and AI. A standout among the announcements was a concept laptop named Lenovo Auto Twist AI PC. According to Lenovo, the Auto Twist AI PC proof of concept is an "innovative leap in personal computing designed to enhance user interaction through intelligent automation and AI." Featuring an Auto Twist design, this next-gen AI PC concept adapts to multiple scenarios with Dual Degree of Freedom. <https://bit.ly/3BbG2NY>

Google's 'Circle to Search' can now search music for you, new Android features announced

Google always tries to enhance user experience with innovative Android features, and the tech giant's latest announcement is no exception. The tech giant has rolled out a fresh batch of Android features, including an update to its 'Circle to Search' feature, which now allows users to search for music effortlessly. Alongside this, Google has introduced several other features aimed at making Android even more intuitive and user-friendly. For those who prefer listening over reading, you can now listen to pages in Chrome. <https://bit.ly/4dmhLCe>

Seeing an option to uninstall AI Recall feature on Windows?

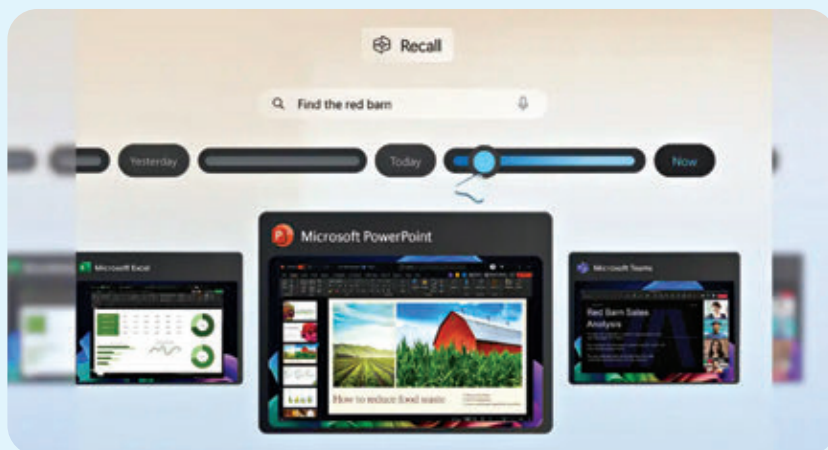

It's just a bug

—By Ayushi Jain

Have you recently noticed that the latest Windows 11 version seems to give you the option to uninstall the AI-powered Recall feature? You're not alone. Many users were surprised to find this option in the Windows Features section. However, Microsoft has clarified that this is just a glitch and not an actual feature.

Windows senior product manager Brandon LeBlanc addressed the confusion, stating in a statement to The Verge, "We are aware of an issue where Recall is incorrectly listed as an option under the 'Turn Windows features on or off' dialog in Control Panel." "This will be fixed in an upcoming update."

So, if you're seeing Recall listed as removable, don't worry—Microsoft is working on correcting this error. When asked about the possibility of fully

uninstalling Recall, as its presence in the Windows features list might imply, Microsoft only confirmed this was just "incorrectly listed" for now.

It's possible that Microsoft may need to add an uninstall option for Recall in Windows 11 for EU users to meet the requirements of the European Commission's Digital Markets Act. The company

previously added an uninstall option for Edge in the European Economic Area (EEA) countries and allowed the removal of Bing-powered web search in the Start menu. Stay tuned for updates from Microsoft, and rest assured that the option to uninstall Recall you're seeing now is nothing more than a bug. <https://bit.ly/3ZuPVR8>
