

brand. Rather, I would like to give you a bottom line here – Whatever is included in the watch works well, with a few exceptions here and there. For example, during my time of use, when I was out for a walk, which is a part of our performance test, the watch kept on alerting me about irregularities in the GPS signal, asking me to move to a more open space. However, I was in one! Apart from that, minor glitches here and there are present in the UI, which can be ironed out with an OTA update, and the fact that there was an update ready for me at the time of setting up the watch, makes me confident that if enough reports come in, Xiaomi will take action.

PERFORMANCE

Across the board, there are considerable inaccuracies reported by the watch. However, one thing that needs to be taken into account is the price. Under-₹3,000, I have come to expect such errors, simply because the brand does not have enough headroom to pack sensors and processors that are capable of churning out accurate metrics that a more expensive watch would put out. So, you will need to temper your expectations when it comes to the vitals tracking on the Redmi Watch 5 Active. Take all the

WALK (2 KM) [% ACCURACY OUT OF 100]	92.5
EXERCISE (2KM WALK) [% ACCURACY OUT OF 100]	50.2
STEP TRACKING ACCURACY [% ACCURACY OUT OF 100]	88.81
HEART RATE TRACKING ACCURACY [% ACCURACY OUT OF 100]	92.5
SPO2 TRACKING [% ACCURACY OUT OF 100]	99
BLOOD PRESSURE	NA
DISPLAY BRIGHTNESS	497 NITS

measurements that are coming from the watch with a grain of salt.

In terms of the battery life, I started my testing with a nice 69 per cent battery on the watch, and as of writing this review, which is about 12 odd hours after my test, with the watch being on my wrist the entire time, the battery dropped to 45 per cent which is not bad. And, given our experience with the Redmi Watch 3 Active, you should get at least 8-10 days of battery life on a single charge with moderate use. You mileage where would depend on how

intensely you use the watch. Keep the flashlight on 5 hours a day, and you will lose out on battery life.

VERDICT

The Redmi Watch 5 Active makes for a great value proposition under ₹3,000. You get a fairly well-built watch that will last you a while, and if you are cutting it some slack given its price, it is a watch that performs well, too. It makes for a great daily companion. You will get plenty of options in this price range, competing for the top step of the podium. However, I would recommend going with this steady performer that comes with a promise of lasting you a considerable amount of time, and will not take a massive hit on your wallet.
