

right which is not something a common consumer definitely should need to go through.

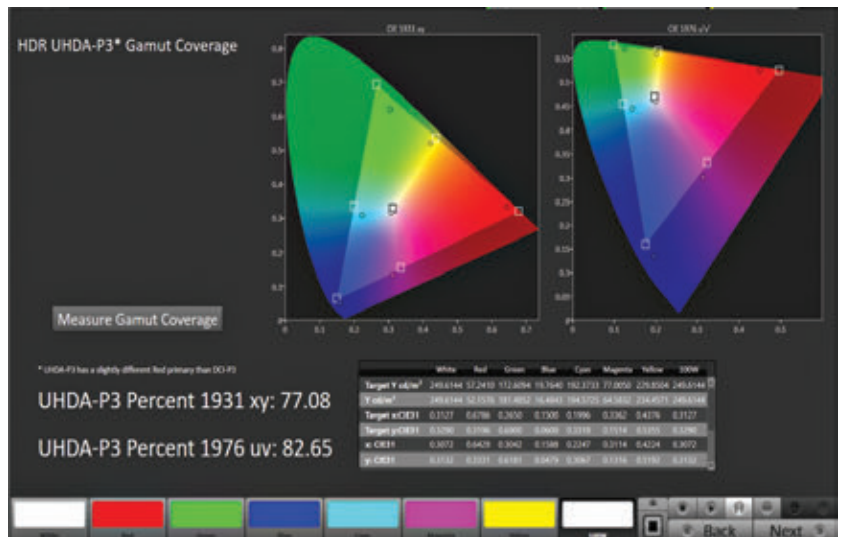

The TV has slight motion smoothing enabled by default. We did not notice any major issues with upscaling of legacy content.

PERFORMANCE AND SOFTWARE

This Hisense TV is powered by a quad-core processor, 2GB of RAM, and 8GB of storage (with 5.6GB available for users). We did experience occasional stutters when fast-forwarding content or switching between apps, but this is again common among affordable and midrange TVs. Overall, the performance was reasonably snappy for the price.

The TV runs on the Google TV platform based on Android 12, with several added customisations. You can access quick settings and shortcuts using the input key. The Google TV interface integrates seamlessly with Google services and apps on smartphones. You can use the virtual remote in the Google TV app, manage your watchlist directly from your PC browser, or even download apps directly to your TV from your phone. Google Assistant and Alexa are both supported on the TV.

You can cast videos from your Android phone or Apple iPhone from popular apps like Netflix, YouTube and more. Apple AirPlay and Homekit are also supported so you can seam-

lessly mirror screen from Apple devices as well. The software does not have much bloatware and Hisense adds useful toggles to let users fine-tune picture quality on the TV.

GAMING AND AUDIO

To test the gaming capabilities, we played *Witcher 3* and *Spiderman 2* on the TV. While the TV has several gaming features like VRR and ALLM. With the game mode enabled, the display felt responsive in our testing. Gaming visuals in HDR and SDR lack contrast and look slightly washed out.

The audio from the 24 Watts speaker is loud but flat. The bass lacks sharpness and dialogue clarity is also about average. For a proper audio

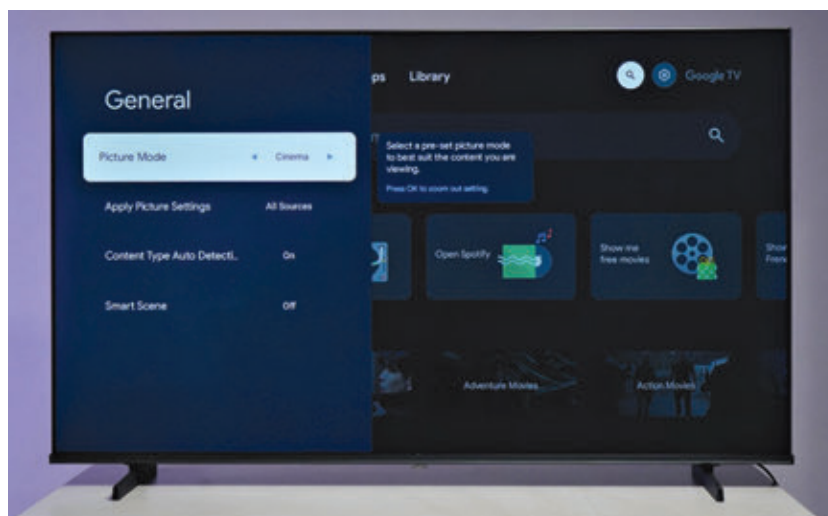

experience, you will have to invest in a decent soundbar.

SHOULD YOU BUY IT?

The Hisense E6N is an affordable TV that performs well in bright viewing environments and delivers reliable performance for basic needs. It features dependable software, an appealing design, a very ergonomic remote and covers all the essential functions. On the downside, the overall picture quality could have been better.

The HDR experience in particular is a little underwhelming, but that is again to be expected at this price.
