

storage blows the Vivo's read and write speeds out of the water. So, the T3 Pro definitely falls behind by a considerable margin here. In the PCMark Storage test, I got a Sequential Read Speed of merely 666 MB/s and a Sequential Write Speed of 832 MB/s. Now in terms of performance, the Vivo T3 Pro does pretty well. The Snapdragon 7 Gen 3 chipset handles intensive tasks with ease, but a smidge more RAM would have improved its multitasking abilities. In synthetic benchmarks, the Vivo T3 Pro outperformed the Motorola Edge 50 Fusion in nearly every test, and its scores were very similar to the Nord CE4. However, the POCO X6 Pro outperformed the T3 Pro in nearly every benchmark test.

For gamers, the T3 Pro includes a dedicated gaming mode that offers features such as performance monitoring and a picture-in-picture mode for apps like WhatsApp, allowing for seamless multitasking during gameplay. Gameplay in games like BGMI and Call of Duty: Mobile is smooth and lag-free but I faced some frame drops in Genshin Impact after 15 minutes of gameplay, which I didn't face on the POCO X6 Pro.

As for software, the T3 Pro runs on Funtouch OS, based on Android 14, offering a user-friendly interface with several customisation options. The software experience is generally smooth and responsive, with features like a sidebar for quick access to app shortcuts. However, the UI feels a bit clunky at times and the presence of bloatware is a notable downside. Users who prefer a minimalist setup may find this aspect of the T3 Pro frustrating, although most of the bloatware can be uninstalled or disabled.

CAMERAS

The Vivo T3 Pro comes equipped with a dual rear camera setup, featuring a 50-megapixel primary Sony IMX882 camera and an 8-megapixel ultra-wide lens. There are three lenses on the camera module, but one of those is a dummy unit. In daylight, the primary camera captures vibrant images with good colour, but the sharpness isn't where I'd like it to be. The low-light photography is satisfactory, but

the main shooter's slow shutter speed becomes more apparent in dim lighting, potentially leading to blurry images if there is any movement.

The ultra-wide lens handles colours well, but it falls short in capturing fine details. Portrait photography, on the other hand, is pretty good. The camera performs admirably in well-lit environments, capturing impressive portraits with decent edge detection and natural background blur, but subjects' skin can look a bit smoothened. And in tricky lighting, you can see some dynamic range issues. For selfie enthusiasts, the front camera, featuring a 16-megapixel sensor, is capable of taking good photos in ample lighting. However, it tends to smoothen out skin textures in dimly lit environments, which may not appeal to all users.

Overall, the Vivo T3 Pro's camera system is competent enough but there's definitely room for improvement here.

BATTERY LIFE

One of the standout features of the Vivo T3 Pro is its impressive battery life. The device is equipped with a large 5,500 mAh battery that supports 80W fast charging. In practical terms, this means the T3 Pro can easily last more than a day of moderate usage, including activities like scrolling through social media, capturing photos, and casual gaming. In the PCMark battery test, the Vivo T3 Pro lasted for an impressive 21 hours and 42 minutes, one of the highest scores recorded

in its category. This endurance makes it an excellent choice for users who need a reliable device that won't require frequent charging throughout the day.

Complementing its long battery life, the T3 Pro's 80W fast charger can fully charge the device from zero to 100% in about 1 hour. However, users may notice the device warming up slightly during the charging process, which is common with high-speed charging technologies. Overall, the Vivo T3 Pro's battery performance is exceptional, living up to the "ultra battery life" claim. Whether you are a heavy user or someone who prefers not to charge your phone frequently, the T3 Pro's battery life is sure to impress.

VERDICT

The Vivo T3 Pro 5G is a well-rounded smartphone that delivers a commendable experience at a mid-range price. With a sleek design, vibrant display, strong performance, and impressive battery life, it ticks many of the boxes for what consumers look for in a modern smartphone. It does have some drawbacks though, such as the presence of bloatware and issues in low-light photography, although these are minor inconveniences in an otherwise compelling package. What bothers me the most is the UFS 2.2 storage, which is sluggish when compared to other performance-focused phones in this price range. Gamers would be better off considering the POCO X6 Pro since gaming on it is smoother and the UFS 4.0 storage speeds are exceptional. For those who want a good balance between display, performance, and battery, the Vivo T3 Pro is definitely worth considering.
