POCO M6 Pro 5G

The POCO M6 Pro 5G tops our list of top 10 smartphones under Rs 10,000 since the newly-launched device is one of the cheapest 5G smartphone from a mainstream manufacturer. Priced at just Rs 9,999 onwards, the POCO M6 Pro 5G doesn't cut too many corners. It

offers a large battery, a large 90Hz display, and an eye-catching design. Over and above all this, we get Qualcomm's latest budget chipset, the Snapdragon 4 Gen 2, which also makes sure you're never low on power and performance.

itel P55 5G

The itel P55 is a budget-friendly 5G smartphone. It features a MediaTek Dimensity 6080 SoC, a 90Hz refresh rate display, a 5,000mAh battery, and a 50MP primary camera. This handset offers reliable performance for everyday tasks, long

battery life, and a decent viewing experience, although it may struggle in direct sunlight. While the cameras are not its strongest suit, they perform adequately in daylight. The itel P55 is ideal for budget-conscious consumers.

Realme Narzo 50A

The Realme Narzo 50A is a solid option under 10K if you need long-lasting battery and decent performance chops. It is also beautifully designed for its price. It comes with a big display and a capable enough processor for daily tasks. The notable Narzo 50A Prime specifications are its underlying Unisoc T612 chipset, a 50MP +2MP+0.3MP camera triplet, an FHD+ panel, and a 5000mAh battery. However, there's no charger in the box and a pretty useless macro lens.

Redmi 12 5G

With the Redmi 12 5G, Xiaomi has done what it does best, bringing premium features to a highly affordable segment. The Redmi 12 5G comes with a lot of premium features, despite being a sub-Rs 10,000 offering, making the smartphone sit prominently in our top 10 list of

under Rs 10,000 smartphones. We get IP53 dust and water resistance, glass back design with Corning Gorilla Glass protection, and one of the biggest displays on any Redmi smartphone, which itself is a rare feature in this segment.

Motorola Moto E40

The Motorola Moto E40 is a good phone for an under-Rs 10,000 budget. Here also, we get a lot of features that are rare in this segment. For example, we get IP52 water and dust resistance, we get a nice and responsive display with 90Hz refresh rate, and we get an

upgraded Unisoc T700 chip as compared to last year's Moto E32. The 10W charging may seem slow as compared to some other devices, but we are still getting a lot under Rs 10,000.
