Redmi 12 5G

The Redmi 12 5G makes 5G more accessible to the masses while keeping the price in check. It sports a sleek and minimalistic design, excellent battery camera, and pretty impressive cameras for the price. The phone has an FHD+ display which actually is one of the better ones at this price and even comes with 90 Hz fast refresh rate, which makes scrolling feel smooth and responsive. The phone's performance is adequate for the price. The Snapdragon 4 Gen 2 SoC runs basic apps without any instances of lag and stutter. In fact, you can even do some light gaming on this device.

POCO M6 Pro 5G

The POCO M6 Pro 5G is the cheapest 5G smartphone in the market right now. Its specifications are almost

identical to the Redmi 12 5G. You've got the same processor, cameras, and battery. So, performance is decent and the primary camera clicks some nice pictures in daylight. The charging is quite slow though, and the phone can take a good 2-2.5 hours to charge to full. Additionally, there's quite a bit of bloatware. Nevertheless, the phone has enough for us to recommend it, especially for the classy design, impressive battery life, and cheap price tag.

Realme C55

What's better than a decent all-rounder phone that doesn't break the bank? A budget all-rounder that you can have a bit

of fun with! The fun quotient comes from Realme's 'Mini Capsule' feature – an iPhone Dynamic Island clone – that indicates charging status, steps walked, and more! That aside, the Realme C55 delivers excellent battery life and super fast 33 W charging at this price point which is very rare. The design is eye-catching and the display comes with 90 Hz refresh rate support. The performance is about on par with the Motorola Moto G42 and it does swimmingly with basic tasks.

Moto G42

A phone that's fantastic value for money in the budget segment is the Motorola Moto G42. The fact that you

not only get a premium design at this price but you also get stereo speakers with Dolby Atmos support, a bright AMOLED display, and excellent battery life just makes this phone a no-brainer budget purchase. The cameras could be better tuned, but for casual users, it should be more than enough to get some share-worthy shots. The UI is another hit on the Moto G42 since it is very close to Stock Android and is devoid of ads and excessive bloatware.

POCO X6 5G

The POCO X6 is a solid mid-range smartphone. It runs on Android 13 with MIUI 14, and a planned upgrade to Android 14. The device is powered by the Snapdragon 7s Gen 2 chipset and comes in variants of 8/12GB RAM and 256/512GB storage. The POCO X6 features a 6.67-inch AMOLED display with a resolution of 1220×2712 pixels, which is not very common at its price point. The triple camera setup includes a 64MP main sensor, an 8MP ultrawide lens, and a 2MP macro lens. Despite its solid performance and brilliant display, its camera performance is inconsistent.
