AI could replace 80% of software engineers who fail to upskill by 2027

As technology continues to advance, the role of software engineers is evolving faster than ever. With generative AI (GenAI) on the rise, a recent report from Gartner reveals a significant shift on the horizon: up to 80% of the engineering workforce will need to upskill by 2027 to remain relevant in their careers. So, what does this mean for you as a software engineer? <https://bit.ly/4fg80af>

Adobe's new AI video model is part of Premiere Pro and aims to take on OpenAI, Meta

At the MAX 2024 conference in Miami, Florida, Adobe unveiled new AI-powered features for its video editing platform, Premiere Pro. These updates aim to enhance content creation and simplify workflows, positioning Adobe to compete with AI advancements from tech giants like OpenAI and Meta. One of the standout features, Generative Extend, allows creators to extend the length of a video clip by simply dragging it. <https://bit.ly/3NLeZvT>

Here's why Godfather of AI opposes OpenAI CEO Sam Altman

Development of ethical AI is his main concern

—By Ayushi Jain

Geoffrey Hinton, widely recognised as the "Godfather of AI," recently received a Nobel Prize for his contributions to artificial intelligence, particularly in developing artificial neural networks. During his acceptance speech, Hinton expressed pride in one of his former students, Ilya Sutskever, who played a significant role in firing of Sam Altman.

"I was particularly fortunate to have many very clever students – much cleverer than me – who actually made things work," Geoffrey Hinton said. "They've gone on to do great things. I'm particularly proud of the fact that one of my students fired Sam Altman." Hinton's concerns stem from his deep

commitment to the ethical development of AI. He believes that under Altman's leadership, OpenAI has shifted from its original mission of ensuring the safety of artificial general intelligence (AGI) to a more profit-driven approach. This change worries Hinton, who has long warned about the potential dangers AI poses to society. He argues that focusing on profits can compromise safety and ethics, which are crucial for responsible AI development.

Hinton, who helped pave the way for AI research by demonstrating the power of neural networks, is particularly alarmed by the increasing capabilities of AI systems. <https://bit.ly/40o65fH>
