

Blaupunkt 65-inch QLED 4K Google TV

Large 65-inch QLED TV for under ₹50k!

₹46,999

65

-inch QLED TVs typically come at a premium,

but this festive season, consumers have a variety of options in the mid-range and affordable segments. The Blaupunkt QLED TV (QD7030) is an affordable option with a lot to look forward to for its aggressive price including support for Dolby Vision and HDR10, 60W audio with Dolby Atmos and more. Do these features converge to deliver a meaningful viewing experience? Let's answer that and more in our review!

DESIGN AND BUILD

This Blaupunkt TV features a fairly standard design and is similar to the other TVs manufactured by SPPL. The stand is made of good-quality polycarbonate and can effectively support the TV on a table. All frequently used ports are side-facing, making them

Design & Usability...8.6

Value for money...7.8

easily accessible. The metal chassis on the rear is solid and durable, while the narrow bezels on the front are non-distracting. Overall, the design is quite appropriate for the price.

The remote control is again the standard TV remote that we get from

SPPL brands like Blaupunkt, Thomson and Kodak. It can connect to the TV via IR or Bluetooth. The build quality of the remote feels a bit flimsy but it is quite comfortable to use. There are dedicated keys to summon Google Assistant, to change user profiles and to switch inputs. The white colour of the D-PAD and Home button further makes the remote easier to use in the dark. The best part is that you get a customizable 'Daily Key' as the fourth App hotkey that you can map to any app of your choice or set two button combinations targeting different apps and functions.

DISPLAY

Our review sample features a decent-quality IPS-level panel for the price. We recorded a native contrast ratio of 1234:1, and the panel is tuned for typical indoor viewing environments. Like most affordable LED LCD TVs, the black floor is elevated, and the panel closely follows the BT.1886 gamma curve. While you can find TVs with VA LCD panels offering better contrast in this budget, they come at the expense of viewing angles. The display on our review unit, however, has wide viewing angles, making it suitable for installation in a spacious area where multiple family members can watch from different angles.

The panel can reproduce almost 100% of Rec. 709 colour space used for SDR content. HDR capabilities are also better than what we usually see in this price segment. The display panel supports 95.7% DCI-P3 coverage and 75% of BT2020 coverage in UV terms.

We recorded a peak brightness of roughly 450 nits in standard mode and around 350 nits in relatively colour-accurate movie mode, which is fairly standard in this budget.

The Gamut rings give a better indication of the colour volume a TV panel can support. We recorded 100% sRGB, 80% Display P3 and roughly 56% of BT2020 colour volume on this TV, which again points the use of a good quality LCD panel for the price. Overall, the display panel quality is better than we usually see in this budget

SDR AND HDR PICTURE QUALITY

We tested the colour accuracy of the display using Spectral C6 HDR2000 Colourimeter, Videoforge Pro pattern generator, and Calman Ultimate software. All measurements are taken in Movie mode which is the most colour-accurate preset on the TV for SDR and HDR10 content.

Starting with SDR, we recorded an average delta error of 4, which is slightly above the perceptible threshold of 3. Skin tones appear natural, but the white point is cooler than the standard D65. While
