

interface is smooth and includes useful features such as Moto Gestures and Smart Connect, both of which I personally love. Motorola has committed to providing three years of OS updates and four years of security updates, although timely delivery of these updates remains a concern. However, Motorola give confirm that all latest Edge and Razer devices will get the Android 15 update before the end of this year. Let's see if they follow through.

The device also includes several AI-driven features, including Gemini integration and Google Photos' AI functionalities. Moto's Style Sync and Magic Canvas give users a taste of generative AI as well. The Razer 50 scored a respectable 74/100 in Digit's AI-Q tests. Despite its performance limitations, the phone's software optimisations and AI features add considerable value.

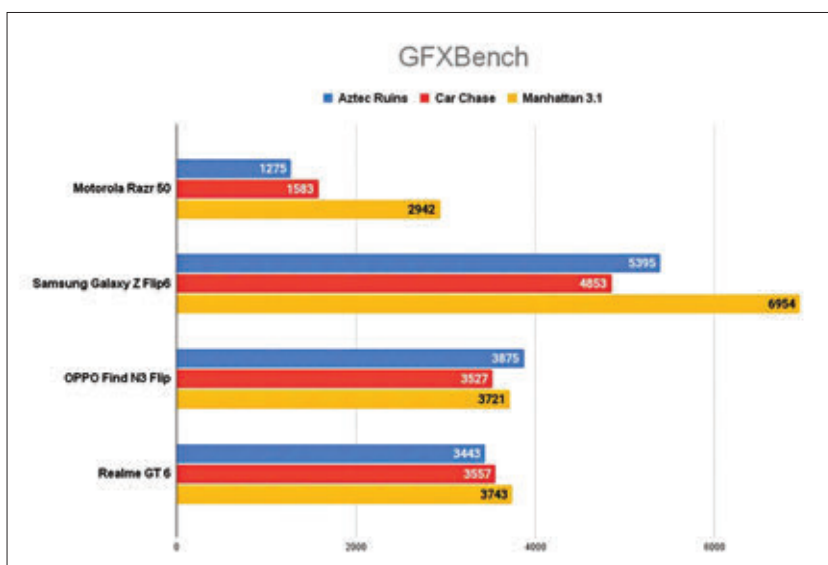

CAMERA

The Motorola Razer 50's camera system represents a step forward from its predecessor, featuring an upgraded 50 MP primary camera with dual pixel PDAF and OIS. In bright conditions, the main camera captures detailed and dynamic photos, though some images may appear slightly artificially sharpened. The camera does exhibit some chromatic aberrations, but close-up shots benefit from impressive natural bokeh.

The 2x in-sensor zoom performs well, maintaining detail although colours can appear overly contrast-heavy. The ultrawide camera, while functional, falls short in terms of detail and sharpness, especially in the shadows and corners. However, its autofocus capabilities enable decent macro shots, which stand out for their quality in this price range.

Portrait mode delivers good detail but struggles with colour accuracy and edge detection. Low-light performance is better with the primary camera, producing detailed images with accurate colours. In contrast, the ultrawide camera's low-light shots suffer from noise and lens flare.

Selfies are serviceable, but using the main camera for selfies results in

much better quality. Both front and rear cameras support 4K video recording at 30 fps, providing high-resolution video capture for users.

BATTERY LIFE

The Motorola Razer 50 is equipped with a 4,200 mAh battery, which delivers adequate performance without standing out. Under heavy use, users can expect around 4-5 hours of screen-on time. In PCMark's Battery Life test, the phone achieved a result of 14 hours and 1 minute, reflecting decent but unremarkable endurance.

The device supports 30W fast charging, taking approximately an hour and three minutes to fully charge from 0 to 100%. It also offers 15W wireless charging, which is a welcome addition. However, the reverse wireless charging feature, or PowerShare, proved unreliable during testing, failing to work as intended despite multiple attempts.

VERDICT

Priced at ₹64,999, the Motorola Razer 50 brings notable advancements to the foldable phone market, particularly with its impressive 3.6-inch cover display that dwarfs the previous generation's screen. It proves to be a solid option for first-time foldable users who don't want to spend a fortune on a smartphone, but want to try out the novel form factor.

Its design is sleek and stylish, featuring a solid build and a luxurious vegan leather back. However, the performance is not as strong as one might hope, with the MediaTek Dimensity 7300X processor showing its limitations in both benchmarks and real-world use. While the camera system performs well in most scenarios, it struggles with certain aspects like colour accuracy, especially in portrait pictures. Battery life is decent but not exceptional.

Overall though, the Motorola Razer 50 offers a compelling foldable experience with its large cover display and elegant design. It's a solid choice for those seeking a stylish and functional foldable phone at a lower price point, but users should temper their expectations regarding performance.
